A U M

This universe existed only in the first divine idea yet unexpanded, as if involved in darkness, imperceptible, undefinable, undiscoverable by reason, and undisclosed by revelation, as if it were wholly immersed in sleep:

Then the sole self-existing power, himself undiscerned, but making this world discernible, appeared with undiminished glory, expanding His idea, or dispelling the gloom.—
Laws of Manu.

What is here (visible in the world), the same is there (invisible in Brahma), and what is there, the same is here. He who sees any difference here, between Brahman and the world, goes from death to death.—*Katha-Upanishad.*

THEOSOPHY

Vol. II **SEPTEMBER 1914** **No. 11**

MASTERS AND THEIR MESSAGE

SOME CHAPTERS FROM THEOSOPHICAL HISTORY.

THE TRIAL OF THE SOCIETY.

THE recognition of pure Theosophy—the philosophy of the rational explanation of things and not the tenets—is of the most vital importance in the Society, inasmuch as it alone can furnish the beacon-light needed to guide humanity on its true path.

This should never be forgotten, nor should the following fact be overlooked. On the day when Theosophy will have accomplished its most holy and important mission—namely, to unite firmly a body of men of all nations in brotherly love and bent on a pure altruistic work, not on a labor with selfish motives—on that day only will Theosophy become higher than any nominal brotherhood of man. This will be a wonder and a miracle truly, for the realization of which Humanity is vainly waiting for the last 18 *centuries, and which every association has hitherto failed to accomplish. The Society was not founded as a nursery for forcing a supply of Occultists—as a factory for the manufactory of Adepts. It was intended to stem the current of materialism, and also that of spiritualistic phenomenalism and the worship of the Dead. It had to guide the spiritual awakening that has now begun, and not to pander to psychic cravings which are but another form of materialism. For by "materialism" is meant not only an anti-philosophical negation*

of pure spirit, and, even more, materialism in conduct and action,—brutality, hypocrisy, and above all, selfishness,—but also the fruits of a disbelief in all but material things, a disbelief which has increased enormously during the last century, and which has led many, after a denial of all existence other than that in matter, into a blind belief in the MATERIALIZATION OF SPIRIT.

H. P. BLAVATSKY . . April 3, 1888:
Letter to the American Convention.

Events have value only as their meaning is understood and applied. Races and nations, like individuals, go on repeating experiences, deriving from them their fixed measure of pain and pleasure, and making but little progress in intelligence. Our own experience and the brief span of recorded history which is ours, ought to make credible to us the statement of the Master in the *Occult World* that human nature in general is the same now as it was a million of years ago. Prejudice, based upon selfishness, a general unwillingness to give up an established order of things for new modes of life and thought—and occult study requires all that and much more—pride and stubborn resistance to truth, if it but upsets their previous notion of things—such are the characteristics of the age.

The desire for stimulants is not removed by a change of beverage. Human nature is not changed or improved by transferring selfish interest to the things which concern the larger span of life. The mission of H. P. B. was not simply to destroy old modes of thought, to break the moulds of men's minds, but to supply new ideas and ideals, to open the way for a change in the *Manas* and *Buddhi* of the race.

The *First Object* of the Theosophical Society was to form a nucleus of universal Brotherhood without any distinctions whatever. Unless and until that First Object was achieved, every idea, every force, every impetus, imparted to the race could only in the end add to the menace and the disaster in store for a humanity given over to selfishness in church and state and society.

The Masters, who are our Elder Brothers, H. P. B., and Mr. Judge never for one instant lost or lose sight of the fact that the universe exists for the purposes of Soul. The extracts from the Masters' letters given in the *Occult World; Light on the Path,* and *Isis Unveiled,* all shine with one truth, burn with one purpose, lay down one line to be followed. The Theosophical Society represents the effort to blaze a pioneer path for all humanity to find and follow.

Isis Unveiled was the Message of the Masters to Humanity at large, and the Theosophical Society represented those units of the human family, whatever their natures otherwise, who for one reason or another were able to give even passing attention to that Message. There is forever one of two viewpoints to assume for the student until by dint of persistent effort he becomes constitu-

tionally incapable of oscillation between the two. From the larger standpoint of an apprehension of the fundamental principles of the philosophy of Theosophy the teachings imparted by Madame Blavatsky were an injection from above and outside the range of human knowledge and human experience; and the Theosophical Society and the Theosophical students a potential vehicle and a sample lot of humanity. On the other hand, from the viewpoint of human knowledge and experience, *Isis Unveiled* and the other teachings presented, could not be other than or more than, the fruit of human effort and experience, and Madame Blavatsky could not be other than or more than a human being—probably more gifted than most, possibly less gifted than some. From this latter viewpoint, therefore, it was and is inevitable that it was Theosophy and Madame Blavatsky which were being tested and which were on trial before the court of human judgment. From the standpoint of the acceptation of the principles of Theosophy and their application to theosophical history and events, it is inevitable that the links of logical deduction will force the conclusion that it was and is the Theosophical Society and the individual students which were and are on trial and under test.

Certainly from the standpoint of the world at large Theosophy and Madame Blavatsky were speedily weighed in the balance and found wanting. Probably few ordinarily intelligent men and women in the world of this and the preceding generation but have heard something at least of Theosophy and of Madame Blavatsky, and on that something have pronounced judgment of indifference, of contempt, or of hostility. Whatever effect Theosophy and H. P. B. have had or may have upon the masses of men's minds—and we hold it to have been prodigious, though but the spore of what will come—it is clear that it was and will continue to be indirect, reflected, secondary and unrecognized.

The effect of the Teachings and of the Teacher upon the Society and its component individuals would necessarily be more marked, more direct, more clearly discernible than upon the race as a whole. How did they stand the test of the first cycle of ten years?

As we have seen, the Society became respectable, both numerically and in the caliber of the individuals who composed it, from the human standpoint. Men of the front rank in science, in theology, in letters, in art, in human activity social and political, joined the Third Section, received their diplomas, read, wrote and talked of the new philosophy and its promises and possibilities. The rolls of the early years show a representation of membership from all races, creeds, and walks in life, a dissemination of Branches and of centres of activity and interest in every part of the globe.

A study of the efforts and literature of the period, aside from direct work of Madame Blavatsky, shows that without exception—apart from William Q. Judge, whose status will be considered in due course—the membership was engaged in the pursuit of psychic

powers; in a study of comparative religion or philosophy; in ardent efforts to reach to communication with the "Masters," or to receive communications from them; in debates, arguments and propaganda for and against this, that and the other "practice," theory, deduction or speculation.

On every hand, in public and in private, H. P. B. was besought for favors, for privileges, for special help and instruction, with offers of help in influence, in money, in propaganda, if only she would gratify the applicant in his particular direction, and especially and dominantly if only she would perform one or two "phenomena." In default of her presence those who had been near or had been witness of any "phenomena" or who had themselves been actually or putatively the experiencers of any psychological disturbances of any kind, were hunted and besought only less fiercely.

Yet enough has been quoted from *Isis Unveiled* alone, not to speak of the extracts given from the Masters' letters in the *Occult World,* or the stern, unalloyed sentences in *Light on the Path,* to show that if words could convey any meaning at all, a debauch of phenomena or phenomena hunting was the last thing to be encouraged by the Masters or by their Philosophy, or by their Messenger.

Few indeed undertook the study of principles laid down, or the application of Law to the events of their ordinary daily lives, or its operation in the events taking place before their eyes. Few indeed gave more than a dead or passive assent to the First object. The philosophy and its exponent were looked upon as something or somebody where might be gratified one's curiosity or desires concerning things hitherto belonging to the limbo of the unbelieved or unbelievable.

Many having failed of receiving, what in their eyes was the just and legitimate reward of their efforts, forsook the Society and resumed their former habitudes. Many, receiving what they scarce hoped could be, made off with their treasure, content with fears removed or doubts satisfied. Others at once began to make capital and following for themselves or their ideas. Some, ardent and sure at first, grew lukewarm and suspicious. In general, it may be said that all the good and all the bad in human nature boiled up furiously in all who were in any way genuine in their efforts, precipitated the Karma of the individuals and of the mass and made ready the separation of the molten metal from the impurities brought to the surface.

In a vast sense all Humanity is under slow trial and test throughout centuries. At cyclic intervals the lure of the higher knowledge and the higher consciousness is placed across the path of mankind. Those who see, whether with good or evil sight, heed and endeavor to possess themselves of the new treasure. This is the first test and the first separation. Of those who heed, the winnowing goes on apace, all unknown to themselves. With every test, a new division, the numbers lessening—for those who choose

aright an ever-growing clarity; for those who fail an ever-increasing obscuration. This is but the repetition of the ancient saying of Krishna: "Among thousands of mortals a single one, perhaps, strives for perfection. And among those so striving perhaps a single one knows me as I am."

Is this favoritism on the part of God, or of the gods? Men think so. Religions inculcate this opinion. Human action gives it credence. The other view is that men, as all other beings, are the arbiters of their own destinies. Those who fail, fail as the result of their own causation. Those who succeed, succeed from their own causation. The true student, having assimilated the Third Fundamental Proposition of the *Secret Doctrine,* is not deceived and not deluded. He knows success is but a larger duty gained; failure, another opportunity.

The Theosophical Society was ready for another trial, another separation. The period 1884-1889 marked it. This is now to be considered. (*To be continued.*) Page 529

The Theosophist Vol. 4- page?

No. VIII.

THE PROGRESS OF HUMANITY.

THE course of Nature provides, as the reader will now have seen, for the indefinite progress towards higher phases of existence of all human entities. But no less will it have been seen that by endowing these entities as they advance with ever-increasing faculties, and by constantly enlarging the scope of their activity nature also furnishes each human entity with more and more decisive opportunities of choosing between good and evil. In the earlier rounds of humanity this privilege of selection is not well developed, and responsibility of action is correspondingly incomplete. The earlier rounds of humanity in fact do not invest the Ego with spiritual responsibility at all in the large sense of the term which we are now approaching. The Devachanic periods which follow each objective existence in turn dispose fully of its merits, demerits, and the most deplorable personality which the Ego during the first half of its evolution can possibly develope is merely dropped out of the account as regards the larger undertaking, while the erring personality itself pays its relatively brief penalty, and troubles nature no more. But the second half of the great evolutionary period is carried on on different principles. The phases of existence which are now coming into view, cannot be entered upon by the Ego without positive merits of its own

*This article was first printed by H. P. Blavatsky in *The Theosophist* for May, 1883.

appropriate to the new development in prospect; it is not enough that the now fully responsible and highly gifted being which man becomes, at the great turning point of his career should float idly on the stream of progress; he must begin to swim, if he wishes to push his way forward.

Debarred by the complexity of the subject from dealing with all its features simultaneously, our survey of nature has so far contemplated the seven rounds of human development, which constitute the whole planetary undertaking with which we are concerned as a continuous series throughout which it is the natural destiny of humanity in general to pass. But it will be remembered that humanity in the sixth round has been spoken of as so highly developed that the sublime faculties and attributes of the highest adeptships are the common apanage of all; while in the seventh round the race has almost emerged from humanity into divinity. Now every human being in this stage of development will still be identified by an uninterrupted connexion, with all the personalities which have been strung upon that thread of life from the beginning of the great evolutionary process. Is it conceivable that the character of such personalities, is of no consequence in the long run, and that two god-like beings might stand side by side in the seventh round, developed, the one from a long series of blameless and serviceable existences, the other from an equally long series of evil and grovelling lines! That surely could not come to pass, and we have to ask now how do we find the congruities of nature preserved compatibly with the appointed evolution of humanity to the higher forms of existence which crown the edifice.

Just as childhood is irresponsible for its acts, the earlier races of humanity are irresponsible for theirs; but there comes the period of full growth, when the complete development of the faculties which enable the individual man to choose between good and evil, in the single life with which he is for the moment concerned, enable the continuous Ego also to make its final selection. That period, that enormous period for nature, is in no hurry to catch its creatures in a trap in such a matter as this,—is barely yet beginning, and a complete round period around the seven worlds will have to be gone through before it is over until the middle of the fifth period is passed on this Earth, the great question—to be or not to be for the future—is not irrevocably settled. We are coming now into the possession of the faculties which render man a fully responsible being, but we have yet to employ these faculties during the maturity of our Ego-hood in the manner which shall determine the vast consequences hereafter.

It is during the first half of the fifth round that the struggle principally takes place. Till then the ordinary course of life may be a good or a bad preparation for the struggle, but cannot fairly be described as the struggle itself. And now we have to examine the nature of the struggle so far merely spoken of as the selection

between good and evil. That is in no way an inaccurate, but it is an incomplete, definition.

The ever-recurring and ever-threatened conflict between intellect and spirituality is the phenomenon to be now examined, the common place conceptions which these two words denote must of course be expanded to some extent before the occult conception is realised, for European habits of thinking are rather apt to set up in the mind an ignoble image of spirituality as an attribute of the character rather than of the mind itself,—a pale goody-goodiness hour of an attachment to religious ceremonial and of devout aspirations, no matter to what whimsical notions of Heaven and Divinity in which the "spiritually-minded" person may have been brought up. Spirituality in the occult sense has little or nothing to do with feeling devout; it has to do with the capacity of the mind for assimilating knowledge at the fountain head of knowledge itself,—of absolute knowledge,—instead of by the circuitous and laborious process of ratiocination.

The development of pure intellect, the ratiocinative faculty, has been the business of European nations for so long, and in this department of human progress they have achieved such magnificent triumphs that nothing in occult philosophy will be less acceptable to European thinkers at first, and while the ideas at stake are imperfectly grasped, than the first aspect of the occult theory concerning intellect and spirituality,—but this does not arise so much from the under-tendency of occult science to depreciate intellect as from the under-tendency of modern western speculation to depreciate spirituality. Broadly speaking, so far western philosophy has had no opportunity of appreciating spirituality; it has not been made acquainted with the range of the inner faculties of man; it has merely groped blindly in the direction of a belief that such inner faculties existed, and Kant himself, the greatest modern exponent of that idea, does little more than contend that there is such a faculty as intuition,—if we only find how to work with it.

The process of working with it *is* occult science in its highest aspect,—the cultivation of spirituality. The cultivation of mere power over the forces of nature, the investigation of some of her subtler secrets as regards the inner principles controlling physical results, is occult science in its lowest aspect, and into that lower region of its activity mere physical science may, or even must, gradually run up. But the acquisition by mere intellect—physical science *in excelsis*—of privileges which are the proper apanages of spirituality, is one of the dangers of that struggle which decides the ultimate destiny of the human Ego. For there is one thing which intellectual processes do not help mankind to realise, and that is the nature and supreme excellence of spiritual existence. On the contrary intellect arises out of physical causes,—the perfection of the physical brain,—and tends only to physical results,—the perfection of material welfare. Although as a concession to

"weak brethren" and "religion," on which it looks with good-humoured contempt, modern intellect does not condemn spirituality, it certainly treats the physical human life as the only serious business with which grave men, or even earnest philanthrophists, can concern themselves. But obviously if spiritual existence, vivid subjective consciousness, really does go on for periods greater than the periods of intellectual physical existence in the ratio as we have seen in discerning the Devachanic condition, in the ratio of 82 to 1, at least then surely man's subjective existence is more important than his physical existence, and intellect in error when all its efforts are bent on the amelioration of the physical existence.

These considerations show how the choice between good and evil,—which has to be made by the human Ego in the course of the great struggle between intellect and spirituality—is not a mere choice between ideas as plainly contrasted as wickedness and virtue. It is not so rough a question as that, whether a man be wicked or virtuous, which must really at the final critical turning point decide whether he shall continue to live and develope into higher phases of existence or cease to live altogether. The truth of the matter (if it is not imprudent at this state of our progress to brush the surface of a new mystery) that the question, to be or not to be, is not settled by reference to the question whether a man be wicked or virtuous *at all.* It will plainly be seen eventually that there must be evil spirituality as well as good spirituality. So that the great question of continued existence turns altogether and of necessity on the question of spirituality as compared with physicality. The point is not so much "*shall* a man live, is he good enough to be permitted to live any longer as," "*can* the men live any longer in the higher levels of existence into which humanity must at last evolve." Has he qualified himself to live by the cultivation of the durable portion of his nature? If not he has got to the end of his tether. The destiny which must befal him is annihilation, not necessarily suffering in a conscious existence but that dissolution that must defal the soul which has wholly assimilated itself to matter—into the eighth sphere of pure matter that Ego must descend, which is unfitted to go on any further in the upward spiral path around the planetary chain.

This is the great meaning of the occult doctrine that, "to be immortal in good, one must identify oneself with God: to be immortal in evil with Satan. These are the two poles of the world of souls; between these two poles vegetate and die without remembrance the useless portion of mankind." The enigma, like all occult formulas, has a lesser application (fitting the microcosm as well as the macrocosm), and in its lesser significance refers to Devachan and Avitchi, and the blank destiny of colourless personalities; but in its more important bearing it relates to the final sorting out of humanity at the middle of the great fifth round, the annihilation of the utterly unspiritual Egos and the passage onward of the others to be immortal in good or immortal in evil. Precisely the

same meaning attaches to "Revelations" (iii. 15-16) "I would thou wert cold or hot; so then because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth." Spirituality then is not devout aspiration; it is the highest kind of intellection, that which takes cognisance of the working of nature by direct assimilation of the mind with her highest principles. The objection which physical intelligence will bring against this view is that the mind can cognise nothing except by observation of phenomena and reasoning thereon. That is the mistake: it can, and the existence of occult science is the highest proof thereof. But there are hints pointing in the direction of such proof all around us if we have but the patience to examine their true bearings. It is idle to say, in fact merely for one thing, of the phenomena of clairvoyance,—crude and imperfect as those have been which have pushed themselves on the attention of the world—that there are no other avenues to consciousness but those of the five senses. Certainly in the ordinary world the clairvoyant faculty is an exceedingly rare one, but indicates the existence in man of a potential faculty the nature of which, as inferred from its slightest manifestation, must obviously be capable in its highest development of leading to a direct assimilation of knowledge independently of observation. One of the most embarrassing difficulties that besets the present attempt to translate the Esoteric Doctrine into plain language, is due really to the fact that spiritual perceptiveness, apart from all ordinary processes by which knowledge is acquired, is a great and grand possibility of human nature. It is by that method in the regular course of occult training that adepts impart instruction to their pupils. They awaken the dormant sense in the pupil, and through this they imbue his mind with a knowledge that such and such a doctrine is the real truth. The whole scheme of evolution which the foregoing chapters pourtrayed, infiltrates into the regular Chela's mind by reason of the fact that he is made to *see* the processes taking place by clairvoyant vision. There are no words used in his instruction at all. And adepts themselves, to whom the facts and processes of nature are familiar as our five fingers to us, find it difficult to explain in a treatise which they cannot illustrate for us, by producing mental pictures in our dormant sixth sense, the complex anatomy of the planetary system.

Certainly, it is not to be expected that mankind as yet should be generally conscious of possessing the sixth sense, for the day of its activity has not yet come. This consideration may serve to introduce a highly important fact connected with evolution which has been passed over in silence till now. Each round in turn is devoted to his perfection in man of the corresponding principle in its numerical order to its preparation for assimilation with the next. The earlier rounds have been described as concerned with man in a shadowy loosely organised, unintelligent form. The fourth round in which we are now engaged, is the round in which the fourth principle, Will, Desire, is fully developed, and in which it is engaged

in assimilating itself with the fifth principle. Reason, Intelligence in the fifth round, the completely developed Reason, Intellect or soul, in which the Ego then resides, must assimilate itself to the sixth principle, spirituality, or give up the business of existence altogether.

All readers of Bhuddist literature are familiar with the constant references made there to the Arhat's union of his soul, with "God." This, in other words, is the premature development of his sixth principle. He forces himself right up through all the obstacles which impede such an operation in the case of a fourth-round man, into that stage of evolution which awaits the rest of humanity,—or rather as much of humanity as may reach it in the ordinary course of nature,—in the latter part of the fifth round. And in doing this it will be observed he tides himself right over the great period of danger—the middle of the fifth round. That is the stupendous achievement of the adept as regards his own personal interests. He has reached the further shore of the sea in which so many of mankind will perish. He waits there in a contentment which people cannot even realise without some glimmerings of spirituality—of the sixth sense themselves for the arrival there of his future companions. He does not wait in his physical body,—let me hasten to add to avoid misconstruction—but when at last *privileged to resign this*, in a spiritual condition which we have not yet endeavoured to describe.

THEOSOPHICAL DON'TS*

The following suggestions arise from experience and are due to facts in the Theosophical world.

Don't speak or write as if morality and ethics were unknown before H. P. B. wrote the *Voice of the Silence*. Some of our devoted band have been heard to speak in such a way that hearers thought the speaker meant to convey the idea that only in the *Voice* or other similar books of ours could be found the high and correct ethics by which one ought to guide his life. Buddhism, Christianity, and all the other religions teach the same morals, and literature is full of it.

Don't say that all the Theosophical doctrines were first given out by the Mahatmas through their Theosophical chelas. Attributing everything solely to the Mahatmas is foolish, as it is easily controverted. And do not be forever saying, "We are taught this and are told that." The number of doctrines found mentioned for the first time by the Mahatmas through H. P. B. are few, extraordinary in conception and scope, and easily recognized.

Don't explain everything by one theory. To wit; do not be so inadequate as to brush off the whole of Spiritualism with one word,

*This article was first printed by Mr. Judge in *The Path* for December, 1894.

"all spooks and shells." You will be wrong if you do so, and the result will be antagonism.

Don't say that science is all wrong and that men of science are materialists. Huxley has done us good service; he has but lately admitted consciousness to be a third factor in the universe, not a part of force and matter; and Spencer has many a good thing in his works. Besides, if you want H. P. B. on the matter, you can read her words that the truth is to be found in a union of science with occultism.

Don't think or say that phenomena are good stepping-stones to Theosophy. They are not, for those who stand upon them will fall from them to their hurt.

Don't run down the spirit of true Christianity, nor imagine that we can get ministers and congregations *en masse* to change into Theosophists. The true spirit of Christianity, as meant to be taught in the beginning, is doubtless Theosophy, but truth is not aided by running amuck among the faith of a whole people.

Don't say that H. P. B. has been reincarnated unless you know it and are able to prove it. To say you think so is not proof. She may or may not be, and either way the work must go on.

Don't talk as if messages from the Masters are all precipitated on rice paper, the writing incorporated in the paper, and such child's talk, indulged in only by those who do not know. And forget not that precipitation proves only that something was precipitated. It can be done by mediums and by various sorts of occultists.

Don't think or say that the only true occultism is found in the East, or that we must go to the East for it, or that the West has none of it. Remember that the greatest known Adept was a Western woman, a Russian, and that the energy of the lodge of Masters was first expended here in the West in this age. If so, is it not reasonable to suppose that the West has its occultists even though hidden? Recollect also that H. P. B. received in her house in New York before witnesses Western men of occult science who worked wonders there at times. Perhaps it is as has been hinted many a time, that the true thing is to be found in a union of the East and the West. The terms Guru and Chela have been misused so that all too many are looking to India for help, from which they will get but little until the West is itself full of wise students of occultism who know the meaning of being placed by karma in the West. The fact is, again, that in the East the men are looking to the great Russian woman for the very spiritual help that first shed its rays upon the West unmistakably. Again, there is extant a letter from the Mahatma K. H. to a Western man wherein it said that he should work in his own land and forget not that Karma so demanded.

Don't teach that vegetarianism is the road to heaven and spiritual growth. Was not the great Nazarene right when he intimated that, the kingdom of heaven being within, it did not come from eating or drinking? And has not our old friend H. P. B. written suggestively that cows and elephants are pure vegetarians? Reflect

on the fact that some of the very best people on earth were meat-eaters, and that wicked or gross thoughts are more hurtful than the eating of a ton of flesh. In fact, . . .

Don't fail to exercise your common sense on all and every occasion. W. Q. J.

HOW SHE MUST LAUGH*

Since the demise of H. P. Blavatsky's body, a little over a year ago, mediums in various parts of the world have reported her "spirit" as giving communications like what follows:

In Paris in May, 1891, that she objected to the cremation of her body and had changed her views. Yes indeed, how her views must have changed! *Nota bene*: this was from a Catholic medium.

In America in September, 1891, that she had absolutely changed all her views and was now sincerely sorry she had promulgated Theosophy at all. Again later, in the United States, that she desired to have materializing and picture-daubing mediums represent her theories and her teachers to the world, and to carry on her work.

About October, 1891, that her old ideas regarding "spooks" had altered, and that now she wished it to be known as her teaching that the cast-off astral remnants of a human being are in fact spirits, and may be taught in the after life! And further, she is at present—presumably in Kamaloka—desirous of seeing all her books burnt so that her old teachings, now pernicious in her sight, may be forgotten as speedily as possible.

Those who communicate these extraordinary reports from H. P. B. are not accused by us of malice or any improper motive. The first "message" came privately from one who had known her in life but whose views were always quite in line with the message. The others represent the different private opinions of the medium or clairvoyant reporting them. Such is nearly always the case with these "spirit messages." They do, indeed, come from psychic planes, and are not strictly the product of the medium's normal brain. But they are the result of obscure thoughts of the medium which color the astral atmosphere, and thus do no more than copy the living. In one case, and that was the hugest joke of all, the medium made a claim to at once step into H. P. B.'s shoes and be acknowledged the leader of the Society!

How she must laugh! Unless mere death may change a sage into an idiot, she is enjoying these jokes, for she had a keen sense of humor, and as it is perfectly certain that Theosophists are not at all disturbed by these "communications," her enjoyment of the fun is not embittered by the idea that staunch old-time Theosophists are being troubled. But what a fantastical world it is with its Materialists, Spiritualists, Christians, Jews, and other barbarians, as well as the obscure Theosophists!

---

THE BHAGAVAD-GITA*

(*Continued from August Number.*)

CHAPTER FOURTH.

In the third chapter Krishna approached the subject of Yoga—or Union with the Supreme and the method of attainment—, and now in the fourth openly speaks of it. He had told Arjuna that passion is greater than either heart or mind, having power to overthrow them, and advised Arjuna to strengthen his hold on his real self, for by means of that only could he hope to overcome passion.

In the opening of this chapter we come across something of importance—the doctrine that in the early part of a new creation, called Manwantara in Sanscrit, a great Being descends among men and imparts certain ideas and aspirations which reverberate all through the succeeding ages until the day when the general dissolution—the night of Brahma—comes on. He says:

> "This deathless Yoga, this deep union,
> I taught Vivaswata, the Lord of Light;
> Vivaswata to Manu gave it; he
> To Ikshwáku; so passed it down the line
> Of all my Royal Rishis. Then, with years,
> The truth grew dim and perished, noble Prince!
> Now once again to thee it is declared—
> This ancient lore, this mystery supreme—
> Seeing I find thee votary and friend."

Exoteric authorities agree that Vivaswata is a name for the sun; that after him came Manu, and his son was Ikshwáku. The latter founded the line of Solar Kings, who in early times in India were men of supreme knowledge. They were adepts every one, and ruled the land as only adepts could, for the darker ages had not come on, and such great Beings could naturally live among men. Every one respected them, and there was no rebellion even in thought, since there could be no occasion for complaint. Although "Vivaswata" as a name for the sun reveals nothing to our western ears, there is a great truth hidden behind it, just as to-day there is as great a mystery behind our solar orb. He was the Being appointed to help and guide the race at its beginning. He had himself, ages before, gone through incarnation during other creations, and had mounted step-by-step up the long ladder of evolution, until by natural right he had become as a god. The same process is going on to-day, preparing some Being for similar work in ages to come. And it has gone on in the limitless past also; and always the Supreme Spirit as Krishna teaches the Being, so that he may implant those ideas necessary for our salvation.

After the race has grown sufficiently, the Being called "The Sun" leaves the spiritual succession to Manu—whether we know him by that name or another—, who carries on the work until men have arrived at the point where they furnish out of the great mass some one of their own number who is capable of founding a line of Kingly Priest Rulers; then Manu retires, leaving the succession in the hands of the Royal Sage, who transmits it to his successors. This succession lasts until the age no longer will permit, and then

*This article was first printed by Mr. Judge in *The Path* for October, 1888.

all things grow confused spiritually, material progress increases, and the dark age, fully come, ushers in the time before dissolution. Such is the present time.

Up to the period marked by the first earthly King called Ikshwáku, the Ruler was a spiritual Being whom all men knew to be such, for his power, glory, benevolence, and wisdom were evident. He lived an immense number of years, and taught men not only Yoga but also arts and sciences. The ideas implanted then, having been set in motion by one who knew all the laws, remain as *inherent ideas* to this day. Thus it is seen that there is no foundation for the pride of ideas felt by so many of us. They are not original. We never would have evolved them ourselves, unaided, and had it not been for the great wisdom of these planetary spirits in the beginning of things, we would be hopelessly drifting now.

The fables in every nation and race about great personages, heroes, magicians, gods, who dwelt among them in the beginning, living long lives, are due to the causes I have outlined. And in spite of all the sneers and labored efforts of scientific scoffers to show that there is no soul, and perhaps no hereafter, the innate belief in the supreme, in heaven, hell, magic, and what not, will remain. They are preserved by the uneducated masses, who, having no scholastic theories to divert their minds, keep up what is left of the succession of ideas.

Arjuna is surprised to hear one whose birth he knew of declaring that Vivaswata was his contemporary, and so asks Krishna how that can happen. Krishna replies, asserting that he and Arjuna had had countless rebirths which he saw and recollected, but Arjuna, being not yet perfect in Yoga, knew not his births, could not remember them. As in the poem Arjuna is also call *Nara*, which means *Man*, we here have an ancient postulation of Reincarnation for all the human family in direct and unmistakeable words.

Then very naturally he opens the doctrine, well known in India, of the reappearances of Avatars. There is some little dispute among the Hindus as to what an Avatar is: that is, whether he is the Supreme Spirit itself or only a man overshadowed by the Supreme to a greater extent than other men. But all admit that the true doctrine is stated by Krishna in the words:—

> * * "I come, and go, and come. When Righteousness
> Declines, O Bharata! when Wickedness
> Is strong, I rise, from age to age, and take
> Visible shape, and move a man with men,
> Succoring the good, thrusting the evil back,
> And setting Virtue on her seat again."

These appearances among men for the purpose of restoring the equilibrium are not the same as the rule of Vivaswata and Manu first spoken of, but are the coming to earth of Avatars or Saviors. That there is a periodicity to them is stated in the words "from age to age." He is here speaking of the great cycles about which hitherto the Masters have been silent except to say that there are

such great cycles. It is very generally admitted now that the cyclic law is of the highest importance in the consideration of the great questions of evolution and Man's destiny. But the coming of an Avatar must be strictly in accordance with natural law,—and that law demands that at the time of such an event there also appears a being who represents the other pole—, for, as Krishna says, the great law of the two opposites is eternally present in the world. So we find in the history of India that, when Krishna appeared so long ago, there was also a great tyrant, a black magician named Kansa, whose wickedness equalled the goodness of Krishna. And to such a possibility the poem refers, where it says that Krishna comes when wickedness has reached a maximum development. The real meaning of this is that the bad Karma of the world goes on increasing with the lapse of the ages, producing at last a creature who is, so to say, the very flower of all the wickedness of the past, counting from the last preceding Avatar. He is not only wicked, but also wise, with magic powers of awful scope, for magic is not alone the heritage of the good. The number of magicians developed among the nations at such a time is very great, but one towers above them all, making the rest pay tribute. It is not a fairy tale but a sober truth, and the present prevalence of self-seeking and money-getting is exactly the sort of training of certain qualities that black magicians will exemplify in ages to come. Then Krishna—or howsoever named—appears "in visible shape, a man with men." His power is as great as the evil one, but he has on his side what the others have not,—spirit, preservative, conservative forces. With these he is able to engage in conflict with the black magicians, and in it is assisted by all of us who are really devoted to Brotherhood. The result is a victory for the good and destruction for the wicked. The latter lose all chance of salvation in that Manwantara, and are precipitated to the lower planes, on which they emerge at the beginning of the next new creation. So not even they are lost, and of their final salvation Krishna speaks thus:—

> "Whoso worship me,
> Them I exalt; *but all men everywhere*
> *Shall fall into my path;* albeit, those souls
> Which seek reward for works, make sacrifice
> Now, to the lower gods."

He also declares that the right and full comprehension of the mystery of his births and work on earth confers upon us Nirvana, so that rebirth occurs no more. This is because it is not possible for a man to understand the mystery unless he has completely liberated himself from the chains of passion and acquired entire concentration. He has learned to look beneath the shell of appearances that deceives the unthinking mind.

This brings us to a rock upon which many persons, theosophists as well as others, fall to pieces. It is personality. Personality is always an illusion, a false picture hiding the reality inside. No person is able to make his bodily environment correspond exactly

to the best that is within him, and others therefore continually judge him by the outward show. If we try, as Krishna directs, to find the divine in everything, we will soon learn not to judge by appearances, and if we follow the advice given in this chapter to do our duty without hope of reward and without trimming ourselves with a desired result in view, the end will be peace.

Krishna then adverts to various systems of religious practice, and shows Arjuna that they all lead at last, but after many births, to Him, by reason of the tendency set up. The different schools are taken up in a few sentences. His dictum is that they "destroy sins," meaning that a certain purification of the nature is thus accomplished, which is followed upon death by a longer stay in Devachan, but it is only to one single practice he awards the distinction of being that which will bring about union with the Supreme Spirit. After enumerating all, not only the performance but also the omitting of sacrifice, he shows Arjuna that spiritual knowledge includes all actions and burns to ashes the binding effects of all work, conferring upon us the power to take Nirvana by reason of emancipation from the delusion that the lower self was the actor. The perfection of this spiritual knowledge is reached by strengthening faith and expelling doubt through devotion and restraint. Then occurs a verse, almost the same as one in the New Testament, "the man of doubtful mind enjoys neither this world not the other, nor final beatitude."

THE GREAT PARADOX*

PARADOX would seem to be the natural language of occultism. Nay more, it would seem to penetrate deep into the heart of things, and thus to be inseparable from any attempt to put into words the truth, the reality which underlies the outward shows of life.

And the paradox is one not in words only, but in action, in the very conduct of life. The paradoxes of occultism must be lived, not uttered only. Herein lies a great danger, for it is only too easy to become lost in the intellectual contemplation of the path, and so to forget that the road can only be known by treading it.

One startling paradox meets the student at the very outset, and confronts him in ever new and strange shapes at each turn of the road. Such an one, perchance, has sought the path desiring a guide, a rule of right for the conduct of his life. He learns that the alpha and the omega, the beginning and the end of *life* is self-

*This article was first printed by H. P. Blavatsky in *Lucifer* for October, 1887.

lessness; and he feels the truth of the saying that only in the profound unconsciousness of self-forgetfulness can the truth and reality of being reveal itself to his eager heart.

The student learns that this is the one law of occultism, at once the science and the art of living, the guide to the goal he desires to attain. He is fired with enthusiasm and enters bravely on the mountain track. He then finds that his teachers do not encourage his ardent flights of sentiment; his all-forgetting yearning for the Infinite—on the outer plane of his actual life and consciousness. At least, if they do not actually damp his enthusiasm, they set him, as the first and indispensable task, *to conquer and control his body*. The student finds that far from being encouraged to live in the soaring thoughts of his brain, and to fancy he has reached that ether where is true freedom—to the forgetting of his body, and his external actions and personality—he is set down to tasks much nearer earth. All his attention and watchfulness are required on the outer plane; he must never forget himself, never lose hold over his body, his mind, his brain. He must even learn to control the expression of every feature, to check the action of each muscle, to be master of every slightest involuntary movement. The daily life around and within him is pointed out as the object of his study and observation. Instead of forgetting what are usually called the petty trifles, the little forgetfulnesses, the accidental slips of tongue or memory, he is forced to become each day more conscious of these lapses, till at last they seem to poison the air he breathes and stifle him, till he seems to lose sight and touch of the great world of freedom towards which he is struggling, till every hour of every day seems full of the bitter taste of self, and his heart grows sick with pain and the struggle of despair. And the darkness is rendered yet deeper by the voice within him, crying ceaselessly, "forget thyself. Beware, lest thou becomest self-concentrated—and the giant weed of spiritual selfishness take firm root in thy heart; beware, beware, beware!"

The voice stirs his heart to its depths, for he feels that the words are true. His daily and hourly battle is teaching him that self-centredness is the root of misery, the cause of pain, and his soul is full of longing to be free.

Thus the disciple is torn by doubt. He trusts his teachers, for he knows that through them speaks the same voice he hears in the silence of his own heart. But now they utter contradictory words: the one, the inner voice, bidding him forget himself utterly in the service of humanity; the other, the spoken word of those from whom he seeks guidance in his service, bidding him *first* to conquer his body, his outer self. And he knows better with every hour how badly he acquits himself in that battle with the Hydra, and he sees seven heads grow afresh in place of each one that he has lopped off.

At first he oscillates between the two, now obeying the one, now the other. But soon he learns that this is fruitless. For the sense of freedom and lightness, which comes at first when he leaves his outer self unwatched, that he may seek the inner air, soon loses its keenness, and some sudden shock reveals to him that he has slipped and fallen on the uphill path. Then, in desperation, he flings himself upon the treacherous snake of self, and strives to choke it into death; but its ever-moving coils elude his grasp, the insidious temptations of its glittering scales blind his vision, and again he becomes involved in the turmoil of the battle, which gains on him from day to day, and which at last seems to fill the whole world, and blot out all else beside from his consciousness. He is face to face with a crushing paradox, the solution of which must be lived before it can be really understood.

In his hours of silent meditation the student will find that there is one space of silence within him where he can find refuge from thoughts and desires, from the turmoil of the senses and the delusions of the mind. By sinking his consciousness deep into his heart he can reach this place—at first only when he is alone in silence and darkness. But when the need for the silence has grown great enough, he will turn to seek it even in the midst of the struggle with self, and he will find it. Only he must not let go of his outer self, or his body; he must learn to retire into this citadel when the battle grows fierce, but to do so without losing sight of the battle; without allowing himself to fancy that by so doing he has won the victory. That victory is won only when all is silence without as within the inner citadel. Fighting thus, from within that silence, the student will find that he has solved the first great paradox.

But paradox still follows him. When first he thus succeeds in thus retreating into himself, he seeks there only for refuge from the storm in his heart. And as he struggles to control the gusts of passion and desire, he realises more fully what mighty powers he has vowed himself to conquer. He still feels himself, apart from the silence, nearer akin to the forces of the storm. How can his puny strength cope with these tyrants of animal nature?

This question is hard to answer in direct words; if, indeed, such an answer can be given. But analogy may point the way where the solution may be sought.

In breathing we take a certain quantity of air into the lungs, and with this we can imitate in miniature the mighty wind of heaven. We can produce a feeble semblance of nature: a tempest in a tea-cup, a gale to blow and even swamp a paper boat. And we can say: "I do this; it is *my* breath." But we cannot blow our breath against a hurricane, still less hold the trade winds in our lungs. Yet the powers of heaven are within us; the nature of the intelligences which guide the world-forces is blended with our own, and could we realise this and forget our outer selves, the very winds would be our instruments.

So it is in life. While a man clings to his outer self—aye, and even to any one of the forms he assumes when this "mortal coil" is cast aside—so long is he trying to blow aside a hurricane with the breath of his lungs. It is useless and idle such an endeavour; for the great winds of life must, sooner or later, sweep him away. But if he changes his altitude *in himself*, if he acts on the faith that his body, his desires, his passions, his brain, are not himself, though he has charge of them and is responsible for them; if he tries to deal with them as parts of nature, then he may hope to become one with the great tides of being, and reach the peaceful place of safe self-forgetfulness at last.

"FAUST."

WILL MASTERS' HELP BE WITHDRAWN IN 1898 UNTIL 1975?*

The theory is widely known among the members of the Society that at the close of each century a spiritual movement is made in the world by the Mahatmas, which begins with the last twenty-five years of the century and does not in that form begin again after the close of twenty-five years until the last quarter of the following period. But this has been exaggerated and much misunderstood. Some, indeed many, go so far as to conclude that then in the course of the next few years the Mahatmas will entirely recede from all work in the world and leave us all to our fate. One person went so far as to argue that it meant the coming of the sixth race in '98, and hence asked how it could be, or what matter it would be, as the sixth race would have sufficient knowledge of itself. But the major part seem to think that no help will be given after that time. I think this is incorrect, and will try to explain it as it was explained to me by the promulgator of the theory, H. P. B.

The Masters are governed by the law of action and reaction, and are wise enough always not to do that which might result in undoing all their prior work. The law of reaction applies as much to the mind of man as to physical things and forces. By going too far at any one time with the throwing-out of great force in the mental plane, the consequence would be that a reaction of superstition and evil of all sort would undo everything. Superstition rules yet in the world, and the world is not confined for the Masters to the Western peoples. In the West, following the historical cycles, a great and definite effort is made among the people—for instance, as the Theosophical Society—so as to aid the psychical and spiritual development of man. Among other reasons for not keeping up the display of much force is that if it went too far many unprepared persons whose moral senses are not rightly governed would take

*This article was first printed by Mr. Judge in *The Path* for November, 1894.

up with all our theories and follow them out along the lines of pure selfishness for business and other purposes.

For that reason, among others, H. P. B. began to slacken her phenomena some time before her departure, although to my own certain knowledge she was able to do them to the last, and did do many of them, and some of the most wonderful sort, up to the last. But publicly it was not so. Some have taken on themselves to say that the reason for this alteration was because she came to the conclusion it was a mistake to do them, but I do not believe this at all. It was a part of a well-understood campaign and order.

At the end of the twenty-five years the Masters will not send out in such a wide and sweeping volume the force they send during the twenty-five years. But that does not mean they will withdraw. They will leave the ideas to germinate in the minds of the people at large, but never will they take away from those who deserve it the help that is due and given to all. However, many will have gone on further by that time than others, and to those who have thus gone on from altruism and unselfish devotion to the good of the race continual help and guiding will be given. Many, however, in and out of the T. S. will continue so selfish and personal that they will have to content themselves with what they will get from others and from the general development. H. P. B. was quite definite on this. It agrees with history. During all the centuries there have been many persons who have had direct and valuable help from Masters, and to suppose that at the end of our first twenty-five years all of that will be finished is an absurdity in itself.

W. Q. J.

H. P. B. frequently remarked in my hearing with regard to this question, that the work done during the last twenty-five years of each century by the Masters and occultists generally belonging to the Brotherhood was *public work* or work as nearly public as it could be made, according to the age and enlightenment of the people with which they had to deal. At all times they assisted and labored with *individuals*. In other words: During the last twenty-five years the conditions in the mental and psychic world are such as to allow work with large bodies of persons, whereas after that the work is more or less confined to the few. This is because it is then the Spring-time of the Cycle, when good and evil tendencies and changes come rapidly into existence. But always there have been attempts made to create an Order or association which should be able to live and carry on the work on the original lines from one century to the other. So far, then, from withdrawing Their help, Their desire is to continue to give it, not only after the close of the cycle, but always and at every time. It is the cyclic conditions only that prevent the influx of spiritual wisdom after the close of the cycle.

But she also said that the amount of power put out was enough to keep the world thinking on these matters far into the coming century, giving as example a train—running at full speed—having its steam shut off; it would continue to run for a long distance after that if left to itself. And the work will not by any means end directly the cycle is ended. On the contrary, she said the endeavor is to educate a number of persons who will be able to preserve the spirit of Theosophical endeavor and keep in touch with the Masters from the close of one public attempt to the beginning of another. This, she declared, is the meaning of the words spoken by one of the adepts—"So long as three persons remain true to the Brotherhood, the Theosophical Society will continue to live." And if this is Their promise it only remains for each member to become one of these three in order that the Society should continue to receive the active help of the Masters all the time.

If it is remembered that it is not because Masters withdraw Their help at all that there is not so much work done at one time as another, but because it is less possible to make changes in the psychic atmosphere during certain seasons than in others, then the rest is perfectly clear. And in order that the Society shall live and continue active as it now is into the next century we have but to educate ourselves as Followers of the Light.

CLAUDE FALLS WRIGHT.

COMMUNICATIONS FROM "SPIRITS"* THEIR SOURCES AND METHODS

I.

The complexity of this subject makes treatment of it difficult. So little is known, and challenge of power to know is so natural, that any treatment must be unsatisfactory. Those "spirits" whose existence as active entities wholly in the spiritual world is claimed by the votaries of the worship of the dead, have not told us clearly anything of lasting value. They have had in America distinctly forty years to give the information in, but disagreeing among themselves and not showing in any way a concert of mental action by way of explanation, nothing has as yet resulted from the very sphere where, if anywhere, the knowledge ought to exist. If it be true, as is asserted for them, that those who have reported are conscious, intelligent spirits, then all of them who while reporting to man have failed to lead him to a right conclusion are blameworthy. Some of these entities or intelligences or spirits or whatever they are have,

*This article was first printed by Mr. Judge in *The Path* for October, 1894.

however, made through their mediums assertions of fact about nature and occult physiology which are in my opinion true, but they have not been accepted. Independently speaking in the air, using trance mediums and writings, they have at various times spoken of and described the astral light; have upheld reincarnation; have sustained the teachings of Swedenborg, and in many ways indicated a complete agreement with Theosophical explanations of occult nature; they have shown that materializations of spirits cannot be possible, and that the sometimes really coagulated forms are liable to be frauds of a pious nature, inasmuch as they are not the bodies of the dead nor in any sense whatever their property, that they are over and over again simply surfaces or masses on which pictures of dead or living may be reflected, being thus a spirit-conjurer's trick beyond our power. But they have found no favor, and the cult does not, as a whole, think along those lines. If, then, the "spirits" themselves failed to get credence, how shall I gain any? The scientific world, on the other hand, knows not these realms, and believing not in either Theosophical or Spiritualistic explanations accords no belief to the one or the other. So we will have to be satisfied with just saying what is in mind, trusting to fate and time alone.

Many factors have to be admitted as present in this question. Some of them may be described, but many must as yet remain untouchable.

First. There are the minds (*a*) of the medium, and (*b*) of the sitter or sitters or enquirers. Neither can be left out of account. At once this should show how vast is the theme, for it is well known that the mind and its powers are but little known.

Second. Occult psychological powers and faculties of all concerned. This would include the subconscious or subliminal mind of the hypnotic schools.

Third. Physical memory, which is automatic, racial, national, and personal. This is present at all times. To overlook it is simply blindness. To trace it is extremely difficult, requiring a trained mind and trained inner sense. It is that memory which causes a child to catch at a support even just at birth; it is the guide in sleep when often we do acts for preservation or otherwise; it brings up the hate that a man of one race may feel for another race after centuries of oppression or repulsion; it causes the cat, no matter how young, to arch back and expand the tail the moment a dog is near. To say that man, the one who is the last great product of all the material evolution, has not this physical memory would be folly. But I have not heard that the spirits have told of this, nor described it, nor indicated how it may be traced, nor to what extent it acts in the simulation of conscious intelligence.

Fourth. Forces in their law and method wholly unknown to medium or sitters. These constitute the moving power, the writing

force, the reflecting power, and all the vast number of hidden powerful forces behind the veil of objective matter.

Fifth. Entities of some kind or another, unseen but present, whether elementals, elementaries, shades, angels, nature-spirits, or what not.

Sixth. The Astral Light, the Ether, the Akasa, the Anima Mundi.

Seventh. The Astral Body of medium and sitter. I have purposely put this by itself, for it has its own automatic action as much as has the physical body. With it must be also noted its memory, its idiosyncrasies, whether it is new for the person in question or whether it is one that has been used for more than one life, though each time in a different body. For if it be new to the present body, its memories and powers and peculiarities will be different from those of one that has actually been through several lives. It is not so rare in fact that the astral body is an old one; many mediums have strange powers because they have several distinct astral memories due to so much prior experience in one astral body. This alone would furnish a field for study, but we have not heard of the "spirits" telling about it, though some have shown that they experience these multiform personalities.

Lastly, there is the great fact well known to those who have studied this subject from its occult side, that the personal inner self centered in the astral body has the power not only to delude itself, but also to delude the brain in the body and cause the person to think that a distinct other personality and intelligence is speaking to the brain from other spheres, when it is from the astral self. This is for some people extremely difficult to grasp, as they cannot see how that which is apparently another person or entity may be themselves acting through the means of the dual consciousness of man. This dual consciousness acts for good or for the opposite in accordance with the Karma and character of the inner, personal self. It sometimes appears to a sensitive as another person asking him to do this, that, or the other, or exhorting to some line of conduct, or merely wearing some definite expression but being silent. The image seems to be another, acts as another, is to all present perception outside the perceiving brain, and no wonder the sensitive thinks it to be another or does not know what to think. And if the present birth happens to be one in which strong psychic power is a part of the nature, the delusion may be all the greater.

Having briefly analyzed to begin with, let us now go further.

During the history of Spiritualism, many communications have been made to and through mediums upon many subjects. Facts have been given that could not be known to the medium, some lofty ideas have also had expression, advice has emanated, prophecies

have been issued, some of the questions that vex the soul have been treated.

That facts of death, kind of death, place where wills might be found have been told, unexecuted purpose of the dead expressed, personal peculiarities of the former person shown, have all been too easily accepted as proof of identity. These things are not proof. If they are, then a parrot or a phonograph may prove identity with a man. The possibilities are too many in other directions for this sort of proof to be final or even competent. The living clairvoyant may, by taking the requisite mental steps, become so absorbed in the person clairvoyantly brought up—both being alive—as to accurately reproduce all the other person's peculiarities. Consequently the same thing done in respect to a deceased may be possible in the same way for a clairvoyant entity on the other side of death reporting to us. But, at the same time, it is the fact that the astral body of the deceased does now and then consciously have a part in such reports by reason of unfinished separation from earth and its concerns, or from gross materiality. In other cases where the astral "shell," as some call it, is involved, it is galvanized by nature spirits or by the power of living beings once men who are condemned by their own character to live and function in the denser part of the astral envelope of the earth.

The very moment we go to a medium, who always forms the condensing focus for these forces and that realm, we begin to draw to us the astral remains of all persons whom we think of or who are enough like us or the medium to fall into the line of attraction. Thus we have in the sphere of the focus those we knew and those we never heard of and who never heard of us when they were alive. Elemental sprites which act as the nerves of nature come also, and they, condensed or plunged into the human astral shells, give a new life to the latter and cause them to simulate intelligence and action sufficient to delude all who are not positively trained in these matters. And this sort of training is almost unknown as yet here; it does not suffice to have followed on the proceedings of hundreds of *seances* or hundreds of experiments; it consists in actual training of the inner senses in the living man. If the astral shape is coherent it will render a coherent report, but that is what also a phonograph will do. If it be partly gone or disintegrated it will, like a damaged phonograph cylinder, give a confused report or suddenly stop, to be replaced by another, better or worse. In no case can it go beyond facts known before to it, or those known to the inner or outer sense of the medium or sitter. And as these astral shells form the greater part of what come to a medium, this is the reason that forty long years of dealing with them have resulted in so little. It is no wonder, then, that the "astral shell" theory has been overworn by many Theosophists, causing Spiritualists to think that to be the only explanation which we have. A judicious fear also has contributed to the much dwelling on this theory, for with it come up all the actual and very present dangers to mediums and sitters. These

galvanized things necessarily are devoid of conscience, and hence cannot but act on and from the very lowest plane of morals and life, just as may happen to be the left-over material memory of the astral person; and that will vary in accord with the essence of the former life and not with its appearance. Hence we may have the shade of Smith or Jones who seemed to their neighbors to have been good men but who in reality always had low or wicked thoughts and strong desires which law or convention prevented them from giving full expression to. In the astral world, however, this hypocrisy is absent, and the real inner character will show itself or have its effect. And in any case whatever, the material shade of the best of men will not be as good as the man tried to be, but will have all the follies and inner sinfulness of his inheritance against which he struggled when living. Therefore it cannot be that these astral remnants are beneficial to us, no matter who was the person they once belonged to. They are but old clothes, and not the spirit of the man. They are less divine than the living criminal, for he still may be a complete trinity.

But good thoughts, good advice, good teaching, high ideas, noble sentiments have also come from this other world, and it cannot be that "astral shells" have given them. If they were sifted out and tabulated, it would be found that they are not different from what living men have said of their own free will and intent. They are not new save as to means of communication. The strangeness of method very often serves to more deeply impress them on the mind of the recipient. But yet this extraordinary means has now and again led men to give them out as something new in all time, as very wonderful, as a revelation, when the unprejudiced observer sees that they are the opposite, are old or trite, and sometimes mixed up with gush and folly, the product of either one side or the other as might happen. This has cast a stigma on the cult of Spiritualism and made the profane to laugh.

We have therefore to consider such communications which were valuable at the time or to a person, and beneficial in their effect. For were we to refuse to do so, the weapon thus forged will cut the Theosophist who so often is found to be a believer—as I am myself —in communications from Masters or Mahatmas who are no less spirits, but rather more so, because they are still in bodies of one sort or another.

WILLIAM Q. JUDGE.

THE ORIGIN OF EVIL*

THE problem of the origin of evil can be philosophically approached only if the archaic Indian formula is taken as the basis of the argument. Ancient wisdom alone solves the presence of the universal fiend in a satisfactory way. It attributes the birth of Kosmos and the evolution of life to the breaking asunder of primordial, manifested UNITY, into plurality, or the great illusion of form. HOMOGENEITY having transformed itself into Heterogeneity, contrasts have naturally been created; hence sprang what we call EVIL, which thenceforward reigned supreme in this "Vale of Tears."

Materialistic Western philosophy (so mis-named) has not failed to profit by this grand metaphysical tenet. Even physical Science, with Chemistry at its head, has turned its attention of late to the first proposition, and directs its efforts toward proving on irrefutable data the homogeneity of primordial matter. But now steps in materialistic Pessimism, a teaching which is neither philosophy nor science, but only a deluge of meaningless words. Pessimism, in its latest development, having ceased to be pantheistic, and having wedded itself to materialism, prepares to make capital out of the old Indian formula. But the atheistic pessimist soars no higher than the terrestrial homogeneous plasm of the Darwinists. For him the *ultima thule* is earth and matter, and he sees, beyond the *prima materia*, only an ugly void, an empty nothingness. Some of the pessimists attempt to poetize their idea after the manner of the whitened sepulchres, or the Mexican corpses, whose ghastly cheeks and lips are thickly covered with rouge. The decay of matter pierces through the mask of seeming life, all efforts to the contrary notwithstanding.

Materialism patronises Indian metaphora and imagery now. In a new work upon the subject by Dr. Mainlander, "Pessimism and Progress," one learns that Indian Pantheism and German Pessimism are *identical;* and that it is the breaking up of homogeneous matter into heterogeneous material, the transition from uniformity to multiformity, which resulted in so unhappy a universe. Saith Pessimism:—

> "This (transition) is precisely the original mistake, the *primordial sin*, which the whole creation has now to expiate by heavy suffering; it is just that *sin*, which, having launched into existence all that lives, plunged it thereby into the abysmal depths of evil and misery, to escape from which there is but one means possible, *i.e.*, by putting *an end to being itself*."

This interpretation of the Eastern formula, attributing to it the first idea of escaping the misery of life by "putting an end to being"—whether that being is viewed as applicable to the whole Kosmos, or only to individual life—is a gross misconception. The

*This article was first printed by H. P. Blavatsky in *Lucifer* for October, 1887.

Eastern pantheist, whose philosophy teaches him to discriminate between Being or ESSE and conditioned existence, would hardly indulge in so absurd an idea as the postulation of such an alternative. He knows he can put an end to *form* alone, not to *being*—and that only on this plane of terrestrial illusion. True, he knows that by killing out in himself *Taṇha* (the unsatisfied desire for existence, or the "*will* to live")—he will thus gradually escape the curse of re-birth and *conditioned* existence. But he knows also that he cannot kill or "put an end," even to his own little life except as a personality, which after all is but a change of dress. And believing but in One Reality, which is eternal *Be-ness*, the "*causeless* CAUSE" from which he has exiled himself unto a world of forms, he regards the temporary and progressing manifestations of it in the state of *Maya* (change or illusion), as the greatest evil, truly; but at the same time as a process in nature, as unavoidable as are the pangs of birth. It is the only means by which he can pass from limited and conditioned lives of sorrow into eternal life, or into that absolute "Be-ness," which is so graphically expressed in the Sanskrit word *sat*.

The "Pessimism" of the Hindu or Buddhist Pantheist is metaphysical, abstruse, and philosophical. The idea that matter and its Protean manifestations are the source and origin of universal evil and sorrow is a very old one, though Gautama Buddha was the first to give to it its definite expression. But the great Indian Reformer assuredly never meant to make of it a handle for the modern pessimist to get hold of, or a peg for the materialist to hang his distorted and pernicious tenets upon! The Sage and Philosopher, who sacrificed himself for Humanity by *living for it, in order to save it*, by teaching men to see in the sensuous existence of matter misery alone, had never in his deep philosophical mind any idea of offering a premium for suicide; his efforts were to release mankind from too strong an attachment to life, which is the chief cause of Selfishness—hence the creator of mutual pain and suffering. In his personal case, Buddha left us an example of fortitude to follow: in living, not in running away from life. His doctrine shows evil immanent, *not in matter* which is eternal, but in the illusions created by it: through the changes and transformations of matter generating life—because these changes are conditioned and such life is ephemeral. At the same time those evils are shown to be not only unavoidable, but necessary. For if we would discern good from evil, light from darkness, and appreciate the former, we can do so only through the contrasts between the two. While Buddha's philosophy points, in its dead-letter meaning, only to the dark side of things on this illusive plane; its esotericism, the hidden soul of it, draws the veil aside and reveals to the Arhat all the glories of LIFE ETERNAL in *all the Homogeneousness of Consciousness and Being*. Another absurdity, no doubt, in the eyes of materialistic science and even modern Idealism, yet a *fact* to the Sage and esoteric Pantheist.

Nevertheless, the root idea that evil is born and generated by the ever increasing complications of the homogeneous material, which enters into form and differentiates more and more as that form becomes physically more perfect, has an esoteric side to it which seems to have never occurred to the modern pessimist. Its dead-letter aspect, however, became the subject of speculation with every ancient thinking nation. Even in India the primitive thought, underlying the formula already cited, has been disfigured by Sectarianism, and has led to the ritualistic, purely dogmatic observances of the *Hatha Yogis,* in contradistinction to the philosophical Vedantic *Raja Yoga.* Pagan and Christian exoteric speculation, and even mediaeval monastic asceticism, have extracted all they could from the originally noble idea, and made it subservient to their narrow-minded sectarian views. Their false conceptions of matter have led the Christians from the earliest day to identify woman with Evil and matter—notwithstanding the worship paid by the Roman Catholic Church to the Virgin.

But the latest application of the misunderstood Indian formula by the Pessimists in Germany is quite original, and rather unexpected, as we shall see. To draw any analogy between a highly metaphysical teaching, and Darwin's theory of physical evolution would, in itself, seem rather a hopeless task. The more so as the theory of natural selection does not preach any conceivable extermination of *being,* but, on the contrary, a continuous and ever increasing development of *life.* Nevertheless, German ingenuity has contrived, by means of scientific paradoxes and much sophistry, to give it a semblance of philosophical truth. The old Indian tenet itself has not escaped litigation at the hands of modern pessimism. The happy discoverer of the theory, that the origin of evil dates from the protoplasmic *Amoeba,* which divided itself for procreation, and thus lost its immaculate homogeneity, has laid claim to the Aryan archaic formula in his new volume. While extolling its philosophy and the depth of ancient conceptions, he declares that it ought to be viewed "as the most profound truth *precogitated* and *robbed* by the ancient sages from modern thought!!"

It thus follows that the deeply religious Pantheism of the Hindu and Buddhist philosopher, and the occasional vagaries of the pessimistic materialist, are placed on the same level and identified by "modern thought." The impassable chasm between the two is ignored. It matters little, it seems, that the Pantheist, recognising no reality in the manifested Kosmos, and regarding it as a simple illusion of his senses, has to view his own existence also as only a bundle of illusions. When, therefore, he speaks of the means of escaping from the sufferings of objective life, his view of those sufferings, and his motive for putting an end to existence are entirely different from those of the pessimistic materialist. For him, pain as well as sorrow are illusions, due to attachment to this life, and ignorance. Therefore he strives after eternal, changeless life, and absolute consciousness in the state of Nirvana; whereas

the European pessimist, taking the "evils" of life as *realities*, aspires when he has the time to aspire after anything except those said mundane *realities*, to annihilation of "being," as he expresses it. For the philosopher there is but one real life, *Nirvanic bliss*, which is a state differing in kind, not in degree only, from that of any of the planes of consciousness in the manifested universe. The Pessimist calls "Nirvana" superstition, and explains it as "cessation of life," life for him beginning and ending on earth. The former ignores in his spiritual aspirations even the integral homogeneous unit, of which the German Pessimist now makes such capital. He knows of, and believes in only the direct cause of that unit, eternal and *ever living, because the* ONE *uncreated*, or rather not evoluted. Hence all his efforts are directed toward the speediest reunion possible with, and return to his *pre*-primordial condition, after his pilgrimage through this illusive series of visionary lives, with their unreal phantasmagoria of sensuous perceptions.

Such pantheism can be qualified as "pessimistic" only by a believer in a personal Providence; by one who contrasts its negation of the reality of anything "created"—*i. e.* conditioned and limited—with his own blind and unphilosophical faith. The Oriental mind does not busy itself with extracting evil from every radical law and manifestation of life, and multiplying every phenomenal quantity by the units of very often imaginary evils: the Eastern Pantheist simply submits to the inevitable, and tries to blot out from his path in life as many "descents into rebirth" as he can, by avoiding the creation of new *Karmic* causes. The Buddhist philosopher knows that the duration of the series of lives of every human being—unless he reaches Nirvana "artificially" ("takes the kingdom of God by violence," in Kabalistic parlance), is given, allegorically, in the *forty-nine days* passed by Gautama the Buddha under the Bo-tree. And the Hindu sage is aware, in his turn, that he has to light the *first*, and extinguish the *forty-ninth fire** before he reaches his final deliverance. Knowing this, both sage and philosopher wait patiently for the natural hour of deliverance; whereas their unlucky copyist, the European Pessimist, is ever ready to commit, as to preach, suicide. Ignorant of the numberless heads of the hydra of existences he is incapable of feeling the same philosophical scorn for life as he does for death, and of, thereby, following the wise example given him by his Oriental brother.

Thus, philosophical pantheism is very different from modern pessimism. The first is based upon the correct understanding of the mysteries of being; the latter is in reality only one more system of evil added by unhealthy fancy to the already large sum of real social evils. In sober truth it is no philosophy, but simply a sys-

*This is an esoteric tenet, and the general reader will not make much out of it. But the Theosophist who has read "Esoteric Buddhism" may compute the 7 by 7 of the *forty-nine* "days," and the *forty-nine* "fires," and understand that the allegory refers esoterically to the seven human consecutive root-races with their seven sub-divisions. Every monad is born in the first and obtains deliverance in the last seventh race. Only a "Buddha" is shown reaching it during the course of one life.

tematic slander of life and being; the bilious utterances of a dyspeptic or an incurable hypochondriac. No parallel can ever be attempted between the two systems of thought.

The seeds of evil and sorrow were indeed the earliest result and consequence of the heterogeneity of the manifested universe. Still they are but an illusion produced by the law of contrasts, which, as described, is a fundamental law in nature. Neither good nor evil would exist were it not for the light they mutually throw on each other. *Being,* under whatever form, having been observed from the World's creation to offer these contrasts, and evil predominating in the universe owing to *Ego*-ship or selfishness, the rich Oriental metaphor has pointed to existence as expiating the mistake of nature; and the human soul (psüche), was henceforth regarded as the scapegoat and victim of *unconscious* OVER-SOUL. But it is not to Pessimism, but to Wisdom that it gave birth. Ignorance alone is the willing martyr, but knowledge is the master of natural Pessimism. Gradually, and by the process of heredity or *atavism,* the latter became innate in man. It is always present in us, howsoever latent and silent its voice in the beginning. Amid the early joys of existence, when we are still full of the vital energies of youth, we are yet apt, each of us, at the first pang of sorrow, after a failure, or at the sudden appearance of a black cloud, to accuse *life* of it; to feel *life* a burden, and often to curse our being. This shows pessimism in our blood, but at the same time the presence of the fruits of ignorance. As mankind multiplies, and with it suffering—which is the natural result of an increasing number of units that generate it—sorrow and pain are intensified. We live in an atmosphere of gloom and despair, but this is because our eyes are downcast and rivetted to the earth, with all its physical and grossly material manifestations. If, instead of that, man proceeding on his life-journey looked—not heavenward, which is but a figure of speech—but *within himself* and centred his point of observation on the *inner* man, he would soon escape from the coils of the great serpent of illusion. From the cradle to the grave, his life would then become supportable and worth living, even in its worst phases.

Pessimism—that chronic suspicion of lurking evil everywhere—is thus of a two-fold nature, and brings fruits of two kinds. It is a natural characteristic in physical man, and becomes a curse only to the ignorant. It is a boon to the spiritual; inasmuch as it makes the latter turn into the right path, and brings him to the discovery of another as fundamental a truth: namely, that all in this world is only *preparatory* because transitory. It is like a chink in the dark prison walls of earth-life, through which breaks in a ray of light from the eternal home, which, illuminating the *inner* senses, whispers to the prisoner in his shell of clay of the origin and the dual mystery of our being. At the same time, it is a tacit proof of the presence in man of that *which knows, without being told,* viz:—that there is another and a better life, once that the curse of earth-lives is lived through.

This explanation of the problem and origin of evil being, as already said, of an entirely metaphysical character, has nothing to do with physical laws. Belonging as it does altogether to the spiritual part of man, to dabble with it superficially is, therefore, far more dangerous than to remain ignorant of it. For, as it lies at the very root of Gautama Buddha's ethics, and since it has now fallen into the hands of the modern Philistines of materialism, to confuse the two systems of "pessimistic" thought can lead but to mental suicide, if it does not lead to worse.

Eastern wisdom teaches that spirit has to pass through the ordeal of incarnation and life, and be baptised with matter before it can reach experience and knowledge. After which only it receives the baptism of soul, or self-consciousness, and may return to its original condition of a god, *plus* experience, ending with omniscience. In other words, it can return to the original state of the homogeneity of primordial essence only through the addition of the fruitage of Karma, which alone is able to create an absolute *conscious* deity, removed but one degree from the absolute ALL.

Even according to the letter of the Bible, evil must have existed before Adam and Eve, who, therefore, are innocent of the slander of the original sin. For, had there been no evil or sin before them, there could exist neither tempting Serpent nor a Tree of Knowledge of *good and evil* in Eden. The characteristics of that apple-tree are shown in the verse when the couple had tasted of its fruit: "The eyes of them both were opened, and *they knew*" many things besides knowing they were naked. Too much knowledge about things of matter is thus rightly shown an evil.

But so it is, and it is our duty to examine and combat the new pernicious theory. Hitherto, pessimism was kept in the regions of philosophy and metaphysics, and showed no pretensions to intrude into the domain of purely physical science, such as Darwinism. The theory of evolution has become almost universal now, and there is no school (save the Sunday and missionary schools) where it is not taught, with more or less modifications from the original programme. On the other hand, there is no other teaching more abused and taken advantage of than evolution, especially by the application of its fundamental laws to the solution of the most compound and abstract problems of man's many sided existence. There, where psychology and even philosophy "fear to tread," materialistic biology applies its sledge-hammer of superficial analogies, and prejudged conclusions. Worse than all, claiming man to be only a higher animal, it maintains this right as undeniably pertaining to the domain of the science of evolution. Paradoxes in those "domains" do not rain now, they pour. As "man is the measure of all things," therefore is man measured and analyzed by the animal. One German materialist claims spiritual and psychic evolution as the lawful property of physiology and biology; the mysteries of embryology and zoology alone, it is said, being capable of solving those of consciousness in man and the origin of his soul.[1]

[1] Haeckel.

Another finds justification for suicide in the example of animals, who, when tired of living, put an end to existence by starvation.[2]

Hitherto pessimism, notwithstanding the abundance and brilliancy of its paradoxes, had a weak point—namely, the absence of any real and evident basis for it to rest upon. Its followers had no living, guiding thought to serve them as a beacon and help them to steer clear of the sandbanks of life—real and imaginary—so profusely sown by themselves in the shape of denunciations against life and being. All they could do was to rely upon their representatives, who occupied their time very ingeniously if not profitably, in tacking the many and various evils of life to the metaphysical propositions of great German thinkers, like Schopenhauer and Hartmann, as small boys tack on coloured tails to the kites of their elders and rejoice at seeing them launched in the air. But now the programme will be changed. The Pessimists have found something more solid and authoritative, if less philosophical, to tack their jeremiads and dirges to, than the metaphysical *kites* of Schopenhauer. The day when they agreed with the views of this philosopher, which pointed at the Universal WILL as the perpetrator of all the World-evil, is gone to return no more. Nor will they be any better satisfied with the hazy "Unconscious" of von Hartmann. They have been seeking diligently for a more congenial and less metaphysical soil to build their pessimistic *philosophy* upon, and they have been rewarded with success, now that the cause of Universal Suffering has been discovered by them in the fundamental laws of physical development. Evil will no longer be allied with the misty and uncertain Phantom called "WILL," but with an actual and obvious fact: the Pessimists will henceforth be towed by the Evolutionists.

The basic argument of their representative has been given in the opening sentence of this article. The Universe and all on it appeared in consequence of the "breaking asunder of UNITY into *Plurality*." This rather dim rendering of the Indian formula is not made to refer, as I have shown, in the mind of the Pessimist, to the one Unity, to the Vedantin abstraction—Parabrahm: otherwise, I should not certainly have used the words "breaking up." Nor does it concern itself much with Mulaprakriti, or the "Veil" of Parabrahm; nor even with the first manifested primordial matter, except inferentially, as follows from Dr. Mainlander's exposition, but chiefly with terrestrial *protoplasm*. Spirit or deity is entirely ignored in this case; evidently because of the necessity for showing the whole as "the lawful domain of physical Science."

In short, the time-honoured formula is claimed to have its basis and to find its justification in the theory that from "a few, perhaps one, single form of the very simplest nature" (Darwin), "all the different animals and plants living to-day, and all the organ-

[2] Leo Bach.

isms that have ever lived on the earth," have gradually developed. It is this axiom of Science, we are told, which justifies and demonstrates the Hindu philosophical tenet. What is this axiom? Why, it is this: Science teaches that the series of transformations through which the seed is made to pass—the seed that grows into a tree, or becomes an *ovum*, or that which develops into an animal—consists in every case in nothing but the passage of the fabric of that seed, from the homogeneous into the heterogeneous or compound form. This is then the scientific verity which checks the Indian formula by that of the Evolutionists, identifies both, and thus exalts ancient wisdom by recognizing it worthy of modern materialistic thought.

This philosophical formula is not simply corroborated by the individual growth and development of isolated species, explains our Pessimist; but it is demonstrated in general as in detail. It is shown justified in the evolution and growth of the Universe as well as in that of our planet. In short, the birth, growth and development of the whole organic world in its integral totality, are there to demonstrate ancient wisdom. From the universals down to the particulars, the organic world is discovered to be subject to the same law of ever increasing elaboration, of the transition from unity to plurality as "the fundamental formula of the evolution of life." Even the growth of nations, of social life, public institutions, the development of the languages, arts and sciences, all this follows inevitably and fatally the all-embracing law of "the breaking asunder of unity into plurality, and the passage of the homogeneous into multiformity."

But while following Indian wisdom, our author exaggerates this fundamental law in his own way, and distorts it. He brings this law to bear even on the historical destinies of mankind. He makes these destinies subservient to, and a proof of, the correctness of the Indian conception. He maintains that humanity as an integral whole, in proportion as it develops and progresses in its evolution, and separates in its parts—each becoming a distinct and independent branch of the unit—drifts more and more away from its original healthy, harmonious unity. The complications of social establishment, social relations, as those of individuality, all lead to the weakening of the vital power, the relaxation of the energy of feeling, and to the destruction of that integral unity, without which no inner harmony is possible. The absence of that harmony generates an inner discord which becomes the cause of the greatest mental misery. Evil has its roots in the very nature of the evolution of life and its complications. Every one of its steps forward is at the same time a step taken toward the dissolution of its energy, and leads to passive apathy. Such is the inevitable result, he says, of every progressive complication of life; because evolution or development is a transition from the homogeneous to the heterogeneous, a scattering of the whole into the many, etc. etc. This terrible law is universal and applies to all creation, from the infini-

tesimally small up to man for, as he says, it is a fundamental law of nature.

Now, it is just in this one-sided view of physical nature, which the German author accepts without one single thought as to its spiritual and psychic aspect, that his school is doomed to certain failure. It is not a question whether the said law of differentiation and its fatal consequences may or may not apply, in certain cases, to the growth and development of the animal species, and even of man; but simply, since it is the basis and main support of the whole new theory of the Pessimistic school, whether it is really a *universal* and fundamental law? We want to know whether this basic formula of evolution embraces the whole process of development and growth in its entirety; and whether, indeed, it is within the domain of physical science or not. If it is "nothing else than the transition from the homogeneous state to the heterogeneous," as says Mainlander, then it remains to be proved that the given process "produces that complicated combination of tissues and organs which forms and completes the perfect animal and plant."

As remarked already by some critics on "Pessimism and Progress," the German Pessimist does not doubt it for one moment. His supposed discovery and teaching "rest wholly on his certitude that development and the fundamental law of the complicated process of organization represent but one thing: the transformation of unity into plurality." Hence the identification of the process with dissolution and decay, and the weakening of all the forces and energies. Mainlander would be right in his analogies were this law of the differentiation of the homogeneous into the heterogeneous to really represent the fundamental law of the evolution of life. But the idea is quite erroneous—metaphysically as well as physically. Evolution does not proceed in a straight line; *no more* than any other process in nature, but journeys on *cyclically*, as does all the rest. The cyclic serpents swallow their tails like the Serpent of Eternity. And it is in this that the Indian formula, which is a Secret Doctrine teaching, is indeed corroborated by the natural Sciences, and especially by biology.

This is what we read in the "Scientific Letters" by an anonymous Russian author and critic.

"In the evolution of isolated individuals, in the evolution of the organic world, in that of the Universe, as in the growth and development of our planet—in short wherever any of the processes of progressive complexity take place, there we find, apart from the transition from unity to plurality, and homogeneity to heterogeneity a *converse transformation—the transition from plurality to unity, from the heterogeneous to the homogeneous.* . . . Minute observation of the given process of progressive complexity has shown, that what takes place in it is not alone the separation of parts, but also their mutual absorption. . . . While one portion of the cells merge into each other and unite into one uniform whole, forming muscular fibres, muscular tissue, others are absorbed in the bone and nerve tissues, etc. etc. The same takes place in the formation of plants. . . ."

In this case material nature repeats the law that acts in the evolution of the psychic and the spiritual: both descend but to re-ascend and merge at the starting-point. *The homogeneous formative mass or element differentiated in its parts, is gradually transformed into the heterogeneous; then, merging those parts into a harmonious whole, it recommences a converse process, or reinvolution, and returns as gradually into its primitive or primordial state.*

Nor does Pessimism find any better support in pure Materialism, as hitherto the latter has been tinged with a decidedly optimistic bias. Its leading advocates have, indeed, never hesitated to sneer at the theological adoration of the "glory of God and all his works." Büchner flings a taunt at the pantheist who sees in so "mad and bad" a world the manifestation of the Absolute. But, on the whole, the materialists admit a balance of good over evil, perhaps as a buffer against any "superstitious" tendency to look out and hope for a better one. Narrow as is their outlook, and limited as is their spiritual horizon, they yet see no cause to despair of the drift of things in general. The *pantheistic* pessimists, however, have never ceased to urge that a despair of conscious being is the only legitimate outcome of atheistic negation. This opinion is, of course, axiomatic, or ought to be so. If "in this life only is there hope," the tragedy of life is absolutely without any *raison d'etre* and a perpetuation of the drama is as foolish as it is futile.

The fact that the conclusions of pessimism have been at last assimilated by a certain class of atheistic writers, is a striking feature of the day, and another sign of the times. It illustrates the truism that the void created by modern scientific negation cannot and can never be filled by the cold prospects offered as a *solatium* to optimists. The Comtean "enthusiasm of Humanity" is a poor thing enough with annihilation of the Race to ensue "as the solar fires die slowly out"—if, indeed, *they do die* at all—to please physical science at the computed time. If all present sorrow and suffering, the fierce struggle for existence and all its attendant horrors, go for nothing in the long run, if MAN is a mere ephemeron, the sport of blind forces, why assist in the perpetuation of the farce. The "ceaseless grind of matter, force and law," will but hurry the swarming human millions into eternal oblivion, and ultimately leave no trace or memory of the past, when things return to the nebulosity of the fire-mist, whence they emerged. Terrestrial life is no object in itself. It is overcast with gloom and misery. It does not seem strange, then, that the Soul-blind negationist should prefer the pessimism of Schopenhauer to the baseless optimism of Strauss and his followers, which, in the face of their teachings, reminds one of the animal spirits of a young donkey, after a good meal of thistles.

One thing is, however, clear: the absolute necessity for some solution, which embraces the facts of existence on an optimistic basis. Modern Society is permeated with an increasing cynicism and honeycombed with disgust of life. This is the result of an

utter ignorance of the operations of Karma and the nature of Soul-evolution. It is from a mistaken allegiance to the dogmas of a mechanical and largely spurious theory of Evolution, that Pessimism has risen to such undue importance. Once the basis of the Great Law is grasped—and what philosophy can furnish better means for such a grasp and final solution, than the esoteric doctrine of the great Indian Sages—there remains no possible *locus standi* for the recent amendments to the Schopenhauerian system of thought or the metaphysical subtleties, woven by the "philosopher of the Unconscious." The reasonableness of *Conscious* Existence can be proved only by the study of the primeval—now esoteric—philosophy. And it says "there is neither death nor life, for both are illusions; being (or *be-ness*) is the only reality." This paradox was repeated thousands of ages later by one of the greatest physiologists that ever lived. "Life is Death" said Claude Bernard. The organism lives because its parts are ever dying. The survival of the fittest is surely based on this truism. The life of the superior whole requires the death of the inferior, the death of the parts depending on and being subservient to it. And, as life is death, so death is life, and the whole great cycle of lives form but ONE EXISTENCE—*the worst day of which is on our planet.*

He who KNOWS will make the best of it. For there is a dawn for every being, when once freed from illusion and ignorance by Knowledge; and he will at last proclaim in truth *and all Consciousness* to Mahamaya:—

"BROKEN THY HOUSE IS, AND THE RIDGE-POLE SPLIT!
DELUSION FASHIONED IT!
SAFE PASS I THENCE—DELIVERANCE TO OBTAIN." . . .

H. P. B.

WRONG POPULAR NOTIONS*

"What are your proofs?" is often asked of the Theosophical student who believes in reincarnation and Karma, who holds to the existence of the astral body, and who thinks that evolution demands a place in the cosmos for Mahatmas (or great souls) as facts and ideals. "If you cannot prove reincarnation just as you would a fact in a court of law, I will not believe," says one, while another says, "Make such objective demonstrations as science does, and then you may expect me to agree with you." But in truth all these objectors accept as proven in the way they demand for Theosophy many things which on a slight examination are seen to rest as much on theory and metaphysical argument as do any of the doctrines found in Theosophical literature. The axioms of mathematics are unprovable;

*This article first printed by Mr. Judge in *The Path* for November, 1894.

the very word assumes that they have to be accepted. Being accepted, we go forward and on the basis of their unproved truth demonstrate other and succedent matters. The theories of modern astronomy are taken as true because by their means eclipses are foretold and other great achievements of that science made possible. But many centuries ago quite different theories of the relations and motions and structure of the heavens allowed the old astronomers to make the same deductions. Let us examine a few words and things.

THE ATOM.

The atom and the molecule are very influential words. They are constantly used by people claiming to follow science, but who indulge in criticisms on the uncertainties of Theosophical speculation. Yet no one ever saw an atom or a molecule. They are accepted as facts by science—just as the spiritually-inclined accept the existence of the invisible soul—yet it is impossible to objectively prove either the one or the other. They are deemed to be proven because they are necessary. But let a Theosophist say that the astral body exists, and Mahatmas also, because both are necessary in evolution, and at once a demand arises for "demonstration" by objective proofs.

THE SUN.

The sun is the apparent source of energy, and is confidently supposed by many to be a mass of burning material. No one, however, knows this to be so. No one was ever there, and the whole set of theories regarding the luminary rests on assumptions. Many natural facts are against some of the theories. The great fact that the higher the mountain the more cold it is on top would be one, not wholly accounted for by theories as to radiation. And when we remember the great, the immense, difference between the various scientific estimates of the sun's heat, doubt increases. Seeing that electricity is now so much better known, and that it is apparently all-pervading, the ancient idea that the sun is a center of electrical or magnetic energy which turns into heat as well as other things on reaching here, becomes plausible and throws some spice of illusion into the doctrine that our sun is a mass of burning matter.

Again, the sun is seen as if over the horizon in full view every clear evening, when in fact he has been some minutes down below the line of sight. Refraction partly accounts for this, but none the less is his apparent visibility or position above the horizon an illusion.

THE STARS.

Many of those that are known as fixed stars are immeasurably far away. Sirius is at an immense distance, and has been receding always many thousands of miles each minute. Others are so far off that it takes one hundred thousand years for their light to reach here.

Yet since records began they have all remained apparently in one place and in the same relation to each other. They constitute a vast illusion. They are moving and yet they remain still. We point the telescope at one of our sister planets, and knowing that its light takes fifteen minutes or more to get to us, we must be continually directing the glass to a point in space where the planet is not, and by no possibility can we point to where it actually is. Still, for all this uncertainty, many complicated and definite calculations are based on these observations of mere illusions.

LATITUDE AND LONGITUDE.

These are practically used every hour of the day for the safeguarding of human life and property. But they exist only in the brains of men, for they are not in the sky or on land. They are theoretical divisions made by man, and they are possible only because the sole reality in nature is that which is jeered at by many as the ideal. But if the ancients are said to be the constructors of a great human chart in the Zodiac, the divisions of which have a bearing on the navigation of the great ocean of human evolution, the proud practical man says that you have but shown the ancients to be fanciful, superstitious, grotesque. But they were not so. Doubtless the saying recorded of Jesus about the time when we should see "the sign of the Son of Man in the heavens" will not so far from now be found to have a practical meaning in human life.

The ancient Sage was like the modern captain. The captain takes an observation of the illusionary stars and the blazing sun, thus discovering whether his ship is near or far from land. The Sage observed the Zodiac, and from the manner it and its boats were related to each other he was able to calculate whether the human freight in the boat of human evolution was near a rock or on the free, open sea in its eternal and momentous journey.

SENSATION OF TOUCH.

Every one is accustomed to say that he has touched this or that object on which his fingers may have rested. But this is not so. We do not touch anything; we only perceive and report a sensation which we call touch. If that sensation is due to actual contact between the skin and the object, then the harder we pressed, and thus the nearer we came to the object's surface, the more accurate should be the sensation. In fact, however, if we press hard we dull the sensation and turn it into one of pain for the skin. There is always a space between the skin and the surface dealt with, just as there is always a space between the molecules of each mass. If two smooth planes be pushed on to each other they will adhere, and the smoother they are the more difficult it will be to get them apart. If we could actually touch the hand to any surface so as to cover all of it with a touching surface, we could not withdraw the hand at all. All that we get, then, by what we call touch is the idea produced by the vibration and by that much of contact as is possible in the case.

CONTINUOUS SOLIDITY.

Quite Theosophical is the scientist when he says that "we cannot know anything of the actual nature of matter in itself, but can only know the sensation or the phenomena." The mineral or metal called even the hardest is not solid or continuous in itself. This is now admitted by all scientific men. Even the diamond, "hardest of all," is a mass of moving molecules made up of like moving atoms. Its hardness is only relative. It is simply harder than glass because its atoms are moving at a more rapid rate. In a recent lecture in London Mr. Bell, a scientific light, told how the edge or point of the diamond cuts the glass because the molecules in the diamond move rapidly and get in between the slower ones of the glass and thus cut it. And so it is with all other masses of matter. They are only masses of molecules in different rates of vibration; none of them solid or hard save in a relative sense. Is it not true, then, as so often held by philosophers and so insisted on by those Adepts who gave us information through H. P. Blavatsky that the world we are in is to be properly considered in a metaphysical sense and not as a mere mechanism that can be explained on mechanical principles? And in the face of all the illusions and all the speculations of life and science, why should the Theosophist be asked to make or give any different sort of proofs than those availed of by science in all its investigations? There is no reason.

WILLIAM Q. JUDGE.

SOME OLD QUESTIONS ANSWERED*

To the Editors of LUCIFER.

AS you invite questions, I take the liberty of submitting one to your consideration.

Is it not to be expected (basing one's reasoning on Theosophical teaching) that the meeting and intercourse in Kama loka of persons truly attached to each other must be fraught with disappointment, nay frequently even with deep grief? Let me illustrate my meaning by an example:

A mother departs this life twenty years before her son, who, deeply attached to her, longs to meet her again, and only finds her "shell," from which all those spiritual qualities have fled which to him were the essential part of the being he loved. Even the "shell" itself, by its resemblance to the former body, only adds to his grief by keeping early memories more vividly alive, and showing him the vast difference between the entity he knew on earth and the remnant he finds.

Or take a second case:

The son meets his mother in Kama loka after a short separation, only to find her entity in a state of disintegration, as her pure spirit has already begun to leave her astral body and to ascend towards Devachan. He has

*This article was first printed by H. P. Blavatsky in *Lucifer* for April, 1888.

to witness this process of gradual dissolution, and day by day he feels his mother's spirit slip away whilst his more material nature prevents him from joining in her rapid progress.

I subjoin my name and address, though not for publication, and remain,

Very truly yours,

"F. T. S."

EDITORS' REPLY.—Our Correspondent seems to have been misled as to the state of consciousness which entities experience in Kama Loca. He seems to have formed his conceptions on the visions of *living* psychics and the revelations of *living* mediums. But all conclusions drawn from such data are vitiated by the fact, that a *living* organism intervenes between the observer and the Kama-loca state *per se*. There can be no *conscious* meeting in Kama-loka, hence no grief. There is no astral disintegration *pari passu* with the separation of the shell from the spirit.

According to the Eastern teaching the state of the deceased in Kama-loca is not what we, living men, would recognise as "conscious." It is rather that of a person stunned and dazed by a violent blow, who has momentarily "lost his senses." Hence in Kama-loca there is as a rule (apart from vicarious life and consciousness awakened through contact with mediums) no *recognition* of friends or relatives, and therefore such a case as stated here is impossible.

We meet those we loved only in Devachan, that subjective world of perfect bliss, the state which succeeds the Kama-loka, after the separation of the principles. In Devachan all our personal, unfulfilled *spiritual* desires and aspirations will be realised; for we shall not be living in the hard world of matter but in those subjective realms wherein a desire finds its instant realisation; because man himself is there a god and a creator.

In dealing with the dicta of psychics and mediums, it must always be remembered that they translate, automatically and unconsciously, their experiences on any plane of consciousness, into the language and experience of our normal physical plane. And this confusion can only be avoided by the special study training of occultism, which teaches how to trace and guide the passage of impressions from one plane to another and fix them on the memory.

Kama-loca may be compared to the dressing-room of an actor, in which he divests himself of the costume of the last part he played before rebecoming himself properly—the immortal *Ego* or the Pilgrim cycling in his Round of Incarnations. The Eternal Ego being stripped in Kama-loca of its lower terrestrial principles, with their passions and desires, it enters into the state of Devachan. And therefore it is said that only the purely spiritual, the non-material emotions, affections, and aspirations accompany the Ego into that state of Bliss. But the process of stripping off the lower, the fourth and part of the fifth, principles is an unconscious one in all normal human beings. It is only in very exceptional cases that there is a slight return to consciousness in Kama-loka: and this is the case of very materialistic unspiritual personalities, who,

devoid of the conditions requisite, cannot enter the state of absolute Rest and Bliss.

To the Editors of LUCIFER.

As a very new member of the Theosophical Society I have jotted down a few points which appear to me to be worthy of your notice.

What books do you specially advise to be read in connection with *Esoteric Buddhism?* and any remarks upon them (1.)

Have the Adepts grown or developed to their present state and powers by their own inherent capacities? If so how far can the steps of the process be described? (2.)

What is known of the training of the Yogees? (3.)

What is known of the Root races of man of which we are said to be the fifth? (4.)

What are Elementals?—their nature, powers and communication with man? (5.)

In what light are Theosophists to regard the whole *account* in the late republication of the T. P. S. of the marriage of the Spirit daughter of Colonel Eaton with the Spirit son of Franklin Pearce?! (6.)

In the Articles on the Esoteric character of the Gospels I observe that as yet no notice has been taken of Prophecy and its alleged fulfilment in Jesus Christ. I have read these with intense interest, and regret that I was unable to obtain the first two numbers of LUCIFER. (7.)

I am, Yours truly,

J. M.

EDITORS' REPLY:—(1.) "Five Years of Theosophy," or better the back numbers of the *"Theosophist,"* and the *"Path,"* also "Light on the Path."

When the general outlines have been mastered, other books can be recommended; but it must always be borne in mind that with *very* few exceptions *all books on these subjects are the works of students, not of Masters,* and must therefore be studied with caution and a well-balanced mind. All *theories* should be tested by the reason and not accepted *en bloc* as revelation.

(2.) The process and growth of the Adepts is the secret of Occultism. Were adeptship easy of attainment many would achieve it, but it is the hardest task in nature, and volumes would be required even to give an outline of the philosophy of this development. (See "Practical Occultism," in this number.)

(3.) Nothing but what they give out themselves—which is very little. Read Patanjali's "Yoga Philosophy;" but with *caution,* for it is very apt to mislead, being written in symbolical language. Compare the article on "Sankhya and Yoga Philosophy" in the *Theosophist* for March.

(4.) Wait for H. P. Blavatsky's forthcoming work: "The Secret Doctrine."

(5.) See "The Secret Doctrine," also "Isis Unveiled," and various articles in the *Theosophist,* especially "The Mineral Monad" (also reprinted in "Five Years of Theosophy").

(6.) The account referred to was quoted to show how absurdly materialistic are the common ideas, even among intelligent Spiritualists, of the post-mortem states. It was intended to bring home vividly the unphilosophical character, and the hopeless inadequacy, of such conceptions.

(7). The subject of "Prophecy" may be dealt with in a future article of the series; but the questions involved are too irritating to the casual Christian reader, too important and need too much bibliographical research, to permit of their continuation from month to month.

To the Editors of LUCIFER.

In the last issue of LUCIFER is a paper "Self-Evident Truths and Logical Deductions." The paper is important, but is not, in my opinion, sufficiently clear. *"One is a Unity* and cannot be divided into two Ones. This is so if we understand Unity to be *many* entities, parts, or forms, organised into a body of harmony so forming a Unity.

I would like to ask, If the Universe, the One or All, must not be of a certain size; and if so, is the Original One, the ever produced, not of the same size?

Also, being an organic Whole, what is the form of the All? And is the form, whatever it is, not also the form of the self-existent Cause or God?

Is nature co-eternal with God? or was there a time, or rather state, when God, the self-existent One, was all in all, before nature was produced from himself? I cannot think of anything of nature, spirit, soul, or God, without the ideas of size, form, member, and relation. So there can be no Life, Law, Cause, or Force, formless in itself, yet causative of forms. All evolutions are in, by, and unto forms; the All-evolver is Himself all Form.

The truth of the Universe is the Form of the Universe. The Truth of God is the Form of God. What Form is that? To attain to that is the great attainment for the intelligence at least. In these few lines my aim is mainly an enquiry.

Respectfully yours,

J. W. HUNTER.

Edinburgh, 29th March, 1888.

EDITORS' REPLY.—According to the Eastern philosophy a unity composed of "many entities, parts, or forms" is a compound unity on the plane of *Maya*—illusion or ignorance. The One universal divine Unity cannot be a differentiated whole, however much "organized into a body of harmony." Organization implies external work out of materials at hand, and can never be connected with the self-existent, eternal, and unconditioned Absolute Unity.

This ONE SELF, absolute intelligence and existence, therefore *non*-intelligence and non-existence (to the finite and conditioned perception of man), is "*impartite*, beyond the range of speech and thought and is the substract of all" teaches *Vedantasara* in its introductory Stanza.

How, then, can the *Infinite* and the *Boundless*, the unconditioned and the *absolute*, be of any *size?* The question can only apply to a dwarfed reflection of the uncreate ray on the *mayavic* plane, or our phenomenal Universe; *to one of the finite Elohim*,

who was most probably in the mind of our correspondent. To the (philosophically) untrained Pantheist, who identifies the objective Kosmos with the abstract Deity, and for whom Kosmos and Deity are synonymous terms, the form of the illusive objectivity must be the form of that Deity. To the (philosophically) trained Pantheist, the abstraction, or the *noumenon*, is the ever to be unknown Deity, the one eternal reality, formless, because homogeneous and *impartite*; boundless, because Omnipresent—as otherwise it would only be a contradiction in ideas not only in terms; and the concrete phenomenal form—its *vehicle*—no better than an aberration of the ever-deceiving physical senses.

"Is nature co-eternal with God?" It depends on what is meant by "nature." If it is objective phenomenal nature, then the answer is—though ever latent in divine Ideation, but being only periodical as a manifestation, it cannot be co-eternal. But "abstract" nature and Deity, or what our correspondent calls "Self-existent cause or God," are inseparable *and even identical.* Theosophy objects to the masculine pronoun used in connection with the Self-existent Cause or Deity. It says IT—inasmuch as that "cause" the *rootless root* of all—is neither male, female, nor anything to which an attribute—something always conditioned, finite, and limited—can be applied. The confession made by our esteemed correspondent that he "cannot think of anything of nature, Spirit (!) Soul or God (!!) without the ideas of size, form, number, and relation," is a living example of the sad spirit of anthropomorphism in this age of ours. It is this theological and dogmatic anthropomorphism which has begotten and is the legitimate parent of materialism. If once we realize that form is merely a temporary perception dependent on our physical senses and the idiosyncrasies of our physical brain and has no existence, *per se,* then this illusion that formless cause cannot be *causative of forms* will soon vanish. To think of Space in relation to any limited area, basing oneself on its three dimensions of length, breadth, and thickness, is strictly in accordance with mechanical ideas; but it is inapplicable in metaphysics and transcendental philosophy. To say then that "the truth of God is the Form of God," is to ignore even the exotericism of the Old Testament. "The Lord spake unto you *out of the midst of the fire.* Ye heard the voice of the words, *but saw no similitude.*" (Deut. iv., 12.) And to think of the All-Evolver as something which has "size, form, number, and relation," *is to think of a finite and conditioned personal God*, a part only of the ALL. And in such case, why should this part be better than its fellow-parts? Why not believe in Gods—the other rays of the All-Light? To say—"Among the gods who is like Thee O Lord" does not make the God so addressed really "the god of gods" or any better than his fellow-gods; it simply shows that every nation made a god of its own, and then, in its great ignorance and superstition, served and flattered and tried to propitiate that god. Poly-

theism on *such* lines, is more rational and philosophical than anthropomorphous monotheism.

To the Editors of LUCIFER.

Several questions have of late occurred to me at the entry of the subject of Theosophy. . . . I am quite new to the study, and must perforce express myself crudely. I gather that an early result of entire devotion to and inner contemplative life, and a life also of fine unselfishness, such a life as is calculated to allow of the growth of faculties otherwise dormant, that a result of this life will be a growing recognition of the underlying unity of man and his surroundings, that to such a man truth will make itself known *from within,* and therefore will claim instant acceptance and unquestionable certitude; that in fact the longer that such a life is lived with unfading enthusiasm, the higher will the central spirit rise in self-assertion, the wider will be the survey of creation, and the more immediate the apprehension of truth; also that with these tends to develop a greater physical command of the forces of nature.

Now I submit that such a life as is here spoken of, *is* led by men who attain to none of these results. Most of us know Christians who seem never to have a selfish thought; who exist in an atmosphere of self-sacrifice for others, and whose leisure is all spent in meditation and in emotional prayer, which surely is seeking after truth. Yet they do not attain it. They fail to rise out of Christianity into Theosophy; they remain for ever limited to, and satisfied with the narrow space they move in. (1.) It may be replied that they do expand slowly. Granted, for some of them. But my point is that there do exist (and one is enough for my purpose) men, and particularly women, leading lives both of spiritual meditation and of unselfishness, to whom nevertheless is not vouchsafed a clearer view of the great universe, a larger apprehension of Theosophic truth, nor any increased physical command of nature. (2.) As regards the last point, take for an example John Stuart Mill. Surely he lived always in the white light of exalted contemplation and in instant readiness of high unselfishness; yet to him came no dawn of Theosophic light, nor any larger hold upon the forces of material nature. (3.) May I ask now for a word of explanation on this point? I apologise for the trouble I give, and for my want of ability in unfolding my difficulty. H. C.

EDITORS' REPLY.—(1.) Nowhere in the theosophic teachings was it stated that a life of entire devotion to one's duty alone, or "a contemplative life," graced even by "fine unselfishness" was sufficient in itself to awaken dormant faculties and lead man to the apprehension of final truths, let alone spiritual powers. To lead such life is an excellent and meritorious thing, under any circumstances, whether one be a Christian or a Mussulman, a Jew, Buddhist or Brahmin, and according to Eastern philosophy it must and will benefit a person, if not in his present then in his future existence on earth, or what we call *rebirth*. But to expect that leading the best of lives helps one—without the help of philosophy and esoteric wisdom—to perceive "the soul of things" and develops in him "a physical command of the forces of nature," *i.e.*, endows him with abnormal or adept powers—is really too sanguine. Less than by any one else can such results be achieved by a sectarian of whatever exoteric creed. For the path to which his meditation is confined, and upon which his contemplation travels, is too narrow, too thickly covered with the weeds of dogmatic beliefs—the fruits of human fancy and error—to permit the pure ray of any Universal

truth to shine upon it. His is a blind faith, and when his eyes open he has to give it up and cease being a "Christian" in the theological sense. The instance is not a good one. It is like pointing to a man immersed in "holy" water in a bath-tub and asking why he has not learnt to swim in it, since he is sitting in such holy fluid. Moreover, "unfading *enthusiasm*" and "*emotional* prayer" are not exactly the conditions required for the achievement of true theosophic and spiritual development. These means can at best help to *psychic* development. If our correspondent is anxious to learn the difference between *Spiritual* and *Psychic* wisdom, between *Sophia* and *Psuche,* let him turn to the Greek text (the English translation is garbled) in the Epistle of James, iii., 15 and 16, and he will know that one is *divine* and the other terrestial, "sensual, devilish."

(2.) The same applies to the second case in hand, and even to the third.

(3.) Both—*i.e.,* persons in general, leading lives of spiritual meditation, and those who like John Stuart Mill live "always in the white light of exalted contemplation," do not pursue truth in the right direction, and therefore they fail; moreover John Stuart Mill set up for himself an arbitrary standard of truth, inasmuch as he made his *physical* consciousness the final court of appeal. His was a case of a wonderful development of the intellectual and terrestrial side of psüche or soul, but Spirit he rejected as all Agnostics do. And how can any final truths be apprehended except by the Spirit, which is the only and eternal reality in Heaven as on Earth?

A lady writes from America:—

In the fourth number of LUCIFER on the 328th page are the words: "Enough has been given out at various times regarding the conditions of post-mortem existence, to furnish a solid block of information on this point."

The writer would be glad to be told where this information may be found. Is it in print? or must one be Occultist enough to find it out in the "Symbology" of the Bible for himself?

"ONE WHO HUNGERS FOR SOME OF THIS KNOWLEDGE."

It is certainly necessary to be an "Occultist" before the post-mortem states of man can be correctly understood and realised, for this can only be accomplished through the actual experience of one who has the faculty of placing his consciousness on the *Kamalokic* and *Devachanic* planes. But a good deal *has* been given out in the "Theosophist." Much also can be learnt from the symbology not only of the Bible but of *all* religions, especially the Egyptian and the Hindu. Only again the key to that symbology is in the keeping of the Occult Sciences and their Custodians.

KALI YUGA AND THE COMING RACE*

(1.) How many years are there in Kali Yuga? (2.) Will the sixth sub-race begin very soon, that is, will it be at the end of the cycle of the first five thousand years of Kali Yuga? (3.) Cannot a person of the fifth race come near where the sixth race shall live?

(1.) Kali Yuga is said by the Brahmins and by the *Secret Doctrine* to be 432,000 years long. We will have to accept the calculation for the present.

(2.) Many thousands of years will pass before the next race will be here, and you will have died several times over before that, and also it is probable you will be one of that race unless you go to some other planet. You have made the error of supposing that the end of the cycle in 1898 is the end of the race. It is not. It is but a minor cycle, though quite important in its way. Hence—

(3.) As we, including you, will be members of the new race in all probability if we take advantage of our opportunities, there is no profit in the question or its answer, for the sixth race not being due for so many centuries, and you being eligible for membership in it, there is no sequence. When the sixth race has fully come, many degenerate examples of the bodies of the fifth will be here with it and among it, but no special place will be kept for its development.

MOON'S MYSTERY AND FATE†

Probably no heavenly body has received as much attention from men in all ages as our moon. Many causes contributed to this. The moon is near us; she is a remarkable and large object in the sky; she enlightens the night; she appears to have much to do with man and his affairs. Omens, spells, wishes, oracles, divination, traditions cluster around her during all time. It would be difficult to find a scripture that does not exalt the moon. The Christian Bible says that God ordained that the sun should rule the day and the moon the night. The Roman Church depicts Mary the Mother of God holding the child while she stands upon the crescent moon. The twelfth chapter of Revelations opens thus:

> And there appeared a great wonder in heaven; a woman clothed with the sun, and the moon under her feet, and upon her head a crown of twelve stars.

Other religions are the same as this modern Hebraic one in giving the moon a very great prominence.

Even science cannot escape the fascination. The brilliancy and nearness of the moon and her many recurring changes all aid in fixing the attention of science. Modern and ancient science alike unite in watching the night's great light as she performs her journey

*This article was first printed by Mr. Judge in *The Path* for January, 1895.
†This article was first printed by Mr. Judge in *The Path* for June, 1894.

round us. Nations regulate themselves and their acts, religious and commercial, by the moon. Feast days of the church are fixed more by the lunar than the solar calendar, for all the movable feasts depend on the moon. Calendars rule commercial affairs in credits, obligations, and settlements.

From earliest times the calendar, ruled in fact by the moon's motion, has been of immense interest to man. Periodically rulers of the earth try to reform the calendar of days and months when it as periodically gets out of order. The present arrangement of months with twenty-eight, twenty-nine, thirty, and thirty-one days was invented to make a calendar which would last some centuries before another one will be needed, just because the moon's motion will not give twelve regular months, but twelve regular ones and one small one of about six days. And when the present style of reckoning was introduced, many communities of men in Europe rebelled because they thought they had been deprived of some actual days of life.

Cæsar ordered a reformation of the calendar by attempting to use the sun, but in time it fell into great confusion. Pope Gregory XIII. directed ten days to be suppressed, and then found that the Julian calendar had an error which would amount to three days in four hundred years—quite a serious matter. The Gregorian year now prevails, except in Russia. But still the greater number of men and the greater number of festivals depend on the moon and her motion. While if we examine the records relating to superstition, we will find that whatever may have been the place once held by the sun, it has been usurped by the moon, leaving one nation distinctly worshippers of the Lord of Day.

Modern Theosophy, coming on the field as the uniter of all religions by explaining the symbols and traditions of each, is not exempt from the mystery of the moon. H. P. Blavatsky is our sole originator of a theory regarding the satellite which one could not have invented with the most wonderful imagination. She says her teachers told her, and leaves us to work out the details; but her theory will bear investigation if taken as part of the whole evolutionary scheme reported by her. If we had thought to escape from lunar dreams and puzzles we were in error, for while she plainly asserts that the former body of the entity now called Man's Earth is the very moon in our sky, the existence of a mystery is as plainly declared. The first mystery which she claimed to reveal—and, indeed, she first of every one states it—is that in a remote period, when there was no earth, the moon existed as an inhabited globe, died, and at once threw out into space all her energies, leaving nothing but the physical vehicle. Those energies revolved and condensed the matter in space near by and produced our earth; the moon, its parent, proceeding towards disintegration, but compelled to revolve around her child, this earth. This gives us a use and history for the moon.

But then the same messenger says that the "superstition" prevailing so long and widely as to the moon's bad influence, as in insanity, in necromancy, and the like, is due to the fact that the moon, being a corpse intimately associated with earth, throws upon the latter, so very near to her, a stream of noxious emanations which, when availed of by wicked and knowing persons, may be used for man's injury. Then the same writer goes on to assert that six mysterious doctrines or facts remain yet untold, and all relating to the moon.

It would be idle to speculate on these mysteries, for it has ever been found that unless the Great Initiates speak the general run of men can but modify, enlarge, or intertwine by their fancy those facts and doctrines of which they have heard. But as to the fate of the moon, H. P. B., speaking for those Initiates, says plainly what is to become of our satellite.

In the first volume of *Secret Doctrine,* in a foot note on page 155 of the first edition, she writes:

> Both [Mercury and Venus] are far older than the earth, and before the latter reaches her seventh Round her mother moon will have dissolved into thin air, as the "moons" of the other planets have, or have not, as the case may be, since there are planets which have *several* moons—a mystery again which no Œdipus of astronomy has solved.

This is extremely plain as to our moon, yet raises another mystery as to the general subject of moons. If correspondence is a law of nature, as I firmly believe, then it would be in accordance with it for the moon, considered as earth's former body, to dissolve all away in course of time. And as evolution proceeds with uniformity, the upward progress of our races and earth should be marked by the gradual fading and final disappearance of the moon, as H. P. B. says. It is likely that before our sixth round is ended, it being the round relating to *Buddhi* as the vehicle of *spirit,* the body of the moon, which was the vehicle for *prana* and astral body, will have disappeared. Very probably one of the unrevealed mysteries has to do with the uses and purposes of and for the whole mass of matter now constituting the moon's bulk. But whatever those mysteries are, the fate of our satellite is very clearly asserted, for the benefit of those who have confidence in H. P. B.'s teachers, and who are willing to take the key of correspondence for the unlocking of the lock of Nature.

WILLIAM BREHON.
